Course Handbook Applied Informatics Bachelor

created at 19.04.2021,19:51	
Head of Studies	Prof. Dr. Helmut Folz
Deputy Head of Studies	Prof. Dr. Klaus Berberich
Chairman of Examination	Prof. Dr. Thomas Kretschmer
Deputy Chairman of Examination	Prof. Dr. Horst Wieker

Qualifikation Goals of Study Programme

Applied Informatics Bachelor - mandatory courses (overview)

Module name (EN)	Code	Semester	Hours per semester week / Teaching method	ECTS	Module coordinator
Bachelor Colloquium	PIB- BK	6	-	3	Studienleitung
Bachelor Thesis	PIB- BT	6	-	12	Studienleitung
Business Communication and Intercultural Competence	PIB- EN1	1	2SU	2	Prof. Dr. Christine Sick
Business Economics	PIB- BWL	1	4V	5	Prof. DrIng. André Miede
Business Informatics	PIB- WIN	2	3V+1U	5	Prof. DrIng. André Miede
Computer Architecture	PIB- RAR	2	3V+1P	5	Prof. Dr. Steffen Knapp
Computer Networks	PIB- RN	4	2V+2P	5	Prof. Dr. Steffen Knapp
Databases	PIB- DB	3	3V+1P	5	Prof. Dr. Klaus Berberich
Distributed Systems	PIB- VS	5	2V+2P	5	Prof. Dr. Markus Esch
Informatics 1	PIB- INF1	1	3V+1U	5	Prof. Dr. Klaus Berberich
Informatics 2	PIB- INF2	2	3V+1U	5	Prof. Dr. Klaus Berberich
Introduction to Operating Systems	PIB- BSE	1	2V	3	DiplIng. Wolfgang Pauly
Mathematics 1	PIB- MA1	1	4V+2U	7	Prof. Dr. Peter Birkner
Mathematics 2	PIB- MA2	2	3V+1U	5	Prof. Dr. Peter Birkner
Mathematics 3	PIB- MA3	3	3V+1U	5	Prof. Dr. Peter Birkner

Microprocessor Technology	PIB- MP	5	2V+2P	5	Prof. DrIng. Jürgen Schäfer
Operating Systems	PIB- BS	4	2V+2P	5	Prof. Dr. Steffen Knapp
Principles of Web Development	PIB- WEB	5	2V+2U	5	Prof. Dr. Thomas Kretschmer
Professional Presentations	PIB- EN3	3	2SU	2	Prof. Dr. Christine Sick
Programming 1	PIB- PR1	1	4V+2P	8	Prof. Dr. Helmut Folz
Programming 2	PIB- PR2	2	4V+2P	8	Prof. Dr. Markus Esch
Programming 3	PIB- PR3	3	2V+2P	5	DiplInf. Christopher Olbertz
Project Management	PIB- PM	3	2V	3	Prof. Dr. Steffen Knapp
Project work	PIB- PA	4	2PA+1S	5	Professoren des Studiengangs
Scientific Work	PIB- WA	4	1V+1U	2	Prof. DrIng. André Miede
Security Engineering	PIB- SE	4	2V+2P	5	Prof. Dr. Damian Weber
Software Engineering	PIB- SWT	3	4V	5	Prof. Dr. Helmut Folz
Technical Reading and Writing	PIB- EN2	2	2SU	2	Prof. Dr. Christine Sick
Theoretical Informatics	PIB- TI	3	4V	5	Prof. Dr. Thomas Kretschmer
Work Experience Phase	PIB- PRA	6	-	15	Studienleitung

(30 modules)

Applied Informatics Bachelor - optional courses (overview)

Module name (EN)	Code	Semester	Hours per semester week / Teaching method	ECTS	Module coordinator
"Engineering Visions" Intensive Program	PIB- IPRE	4	3PA+1S	4	Prof. Dr. Martin Löffler-Mang
.NET Concepts and Tools	PIB- NETW	4	2V+2P	5	Thomas Beckert, M.Sc.
Applied Computer Science Seminar	PIB- SAI	5	25	3	Prof. Dr Ing. André Miede
Automotive Engineering	PIB- ATEC	4	2V	3	Prof. Dr. Horst Wieker
Basic Principles Governing the Qualification of Trainers and Instructors in Germany's Dual Education and Vocational Training System	PIB- AUSB	4	2V	2	Prof. Dr Ing. Dietmar Brück
Broadband Technology and its Applications	PIB- BBTA	4	2V	3	Prof. Dr. Horst Wieker
Chinese for Beginners 2	PIB- CHI2	4, 5, or 6	2V	2	Prof. Dr. Thomas Tinnefeld
Chinese for Beginners I	PIB- CHI1	5	2V	2	Prof. Dr. Thomas Tinnefeld
Cloud Computing	PIB- CCOM	4	2V+2PA	5	Prof. Dr. Markus Esch
Compiler Design	PIB- CBAU	5	2V+2P	5	Thorsten Jakobs, M.Sc.
Computer Science and Society Seminar	PIB- SCSS	6	25	3	Prof. Dr Ing. André Miede
Computer Science in the Media	PIB- SIDM	4	2S	3	Prof. Dr. Klaus Berberich
Computer Vision	PIB- CVIS	4	4V	5	N.N.

Design Patterns	PIB- EWM	5	2V	3	Prof. Dr. Helmut Folz
Digital Television Technology	PIB- DIGF	4	2V	3	Prof. Dr. Martin Buchholz
Electromobility	PIB- EMOB	4	2V	3	Prof. Dr. Horst Wieker
Embedded Linux	PIB- EMBL	4	2V+2P	4	DiplInf. Ulrich Bruch
Enterprise Java Beans	PIB- EJB	5	2V+2P	5	Prof. Dr. Helmut Folz
Error-Identification and Error- Correcting Codes	PIB- FFKC	5	2V	3	DiplMath. Wolfgang Braun
French I	PIB- FRA1	5	2SU	2	Prof. Dr. Christine Sick
French II	PIB- FRA2	6	250	2	Prof. Dr. Christine Sick
French for Beginners I	PIB- FFA1	5	250	2	Prof. Dr. Christine Sick
French for Beginners II	PIB- FFA2	6	250	2	Prof. Dr. Christine Sick
Functional Programming	PIB- FPRG	4	2V+2P	6	Prof. Dr. Thomas Kretschmer
Future Internet: Software Defined Networking	PIB- FSDN	5	4V	4	Prof. Dr. Damian Weber
GUI Programming with Qt	PIB- PRQT	4	4V	5	Hong-Phuc Bui, M.Sc.
Game Design and Development	PIB- GDEV	6	2V+2P	5	Prof. Dr Ing. André Miede
Human Computer Interaction	PIB- HCI	5	4∨	5	Prof. Steven Frysinger
IT Forensics	PIB- ITF	5	1V+1P	2	Prof. Dr. Damian Weber

IT Forensics Practical Course	PIB- ITFP	4	2Р	3	Prof. Dr. Damian Weber
IT Security Project	PIB- PITS	5	4PA	5	Prof. Dr. Damian Weber
Industrial Ecology	PIB- INEC	4	4V	5	Prof. Steven Frysinger
Information Retrieval	PIB- IRET	5	2V+2PA	5	Prof. Dr. Klaus Berberich
Intercultural Communication	PIB- INTK	6	250	2	Prof. Dr. Christine Sick
Internet Development with Java 1	PIB- IJA1	5	2V+2P	5	DiplInf. Christopher Olbertz
Internet Development with Java 2	PIB- IJA2	6	2V+2P	5	DiplInf. Christopher Olbertz
Internet Technologies	PIB- INET	5	2V+2P	5	Prof. Dr. Martina Lehser
Internet and the Law	PIB- REII	5	2V	2	RA Cordula Hildebrandt
Introduction to Astronomy	PIB- ASTR	5	2V	2	Prof. Dr. Martin Löffler-Mang
Introduction to Parallel Programming with CUDA	PIB- CUDA	5	1V+1P	3	DiplInform. Marion Bohr
Introduction to Single-Board Computers	PIB- EE	4, 5, or 6	2V+2PA	5	Prof. Dr. Peter Birkner
Introduction to Wireless LANs	PIB- WLAN	4	2V	3	DiplMath. Wolfgang Braun
Law for Business Founders	PIB- REXG	4	2V	2	RA Cordula Hildebrandt
Machine Learning	PIB- MLRN	6	2V+2U	5	Prof. Dr. Klaus Berberich
Mathematical Software Systems and Algorithmic Applications	PIB- MSAA	5	4V	5	Prof. Dr. Barbara Grabowski

Measurements and Simulations in Communications Engineering	PIB- MSNT	6	2V+2P	5	Prof. Dr. Albrecht Kunz
Mentoring	PIB- MENT	5	25	2	Prof. Dr. Simone Odierna
Methods and Applications from the Field of Artificial Intelligence for Signal and Image Processing	PIB- KISB	6	4PA	5	Prof. Dr Ing. Ahmad Osman
Mobile Application Development (Android)	PIB- MADA	5	2V+2P	5	Christoph Karls, M.Sc.
Numerical Software	PIB- NUMS	4, 5, or 6	2V+2PA	5	Prof. Dr. Gerald Kroisandt
Presenting a Project	PIB- SSP	4	2V	2	Prof. Dr. Christine Sick
Programming 4	PIB- PRG4	4	3V+1P	5	Prof. Dr. Helmut Folz

Ruby on Rails	PIB- RUBY	4	3V+1P	4	DiplInf. Julian Fischer
Running RoboNight Workshops	PIB- ROBO	4	1PA+1S	3	Prof. Dr. Martina Lehser
Russian for Beginners 1	PIB- RFA1	4	2SU	2	Prof. Dr. Christine Sick
Russian for Beginners 2	PIB- RFA2	4	2SU	2	Prof. Dr. Christine Sick
Semiconductor Technology and Production	PIB- HLTP	4	4V	5	Prof. Dr. Albrecht Kunz
Sino-German Student Club for Smart Sensors	PIB- SGSC	4	1V+3PA	5	Prof. Dr. Martina Lehser

Software Development for Collaborative Industrial Robots	PIB- IROB	5	4PA	5	Prof. Dr. Martina Lehser
Spanish for Beginners I	PIB- SFA1	5	250	2	Prof. Dr. Christine Sick
Spanish for Beginners II	PIB- SFA2	6	25U	2	Prof. Dr. Christine Sick
Systems Engineering	PIB- SYSE	4	2V+2PA	5	Prof. Dr. Martin Buchholz
Technical Documentation	PIB- TDOK	4	2V	2	Prof. Dr. Walter Calles
Web Security Project	PIB- PWS	4	1V+1PA	3	Prof. Dr. Damian Weber

(67 modules)

Applied Informatics Bachelor - mandatory courses

Bachelor Colloquium

Module name (EN): Bachelor Colloquium
Degree programme: Applied Informatics, Bachelor, ASPO 01.10.2017
Module code: PIB-BK
Hours per semester week / Teaching method: -
ECTS credits: 3
Semester: 6
Mandatory course: yes
Language of instruction: German
Assessment: Oral presentation
[updated 26.02.2018]
Curricular relevance: DFIW-BK Computer Science and Web Engineering, Bachelor, ASPO 01.10.2019, semester 6, mandatory course KIB-BAK Computer Science and Communication Systems, Bachelor, ASPO 01.10.2017, semester 6, mandatory course PIB-BK Applied Informatics, Bachelor, ASPO 01.10.2017, semester 6, mandatory course
Workload: The total student study time for this course is 90 hours.
Recommended prerequisites (modules): None.
Recommended as prerequisite for:
Module coordinator: Studienleitung
Lecturer: Professoren des Studiengangs
[updated 25.07.2017]
Learning outcomes: Students _ will be able to analyze comprehensive material independently. _ will be able to summarize complex interrelationships and present them in a professional manner. _ will also be able to answer more detailed questions on the subject areas of their Bachelor thesis competently.
[updated 26.02.2018]

Module content:

The goal of the Bachelor colloquium is to present and explain the results and content of the Bachelor thesis orally and to verify that the work was done independently.

[updated 26.02.2018]

Recommended or required reading:

Literature listed in the respective Bachelor thesis.

[updated 26.02.2018]

Bachelor Thesis

Module name (EN): Bachelor Thesis Degree programme: Applied Informatics, Bachelor, ASPO 01.10.2017 Module code: PIB-BT
Module code: PIB-BT
Hours per semester week / Teaching method: -
ECTS credits: 12
Semester: 6
Mandatory course: yes
Language of instruction: German
Assessment: Written composition
[updated 26.02.2018]
Curricular relevance: DFIW-BT Computer Science and Web Engineering, Bachelor, ASPO 01.10.2019, semester 6, mandatory course KIB-BAT Computer Science and Communication Systems, Bachelor, ASPO 01.10.2017, semester 6, mandatory course PIB-BT Applied Informatics, Bachelor, ASPO 01.10.2017, semester 6, mandatory course
Workload: The total student study time for this course is 360 hours.
Recommended prerequisites (modules): None.
Recommended as prerequisite for:
Module coordinator: Studienleitung
Lecturer: Professoren des Studiengangs
[updated 25.07.2017]

Students

_ will be able to work independently on given (medium to difficult) subject-specific tasks within a given period of time using scientific methods.

_ will be capable of using the specialist knowledge and methods acquired during their studies to develop ways to select suitable solutions in a goal- and result-oriented manner.

_ will be able to analyze topics in cooperation with external and internal clients and colleagues, conceive their solution and implement them accordingly.

And lastly, students will be able to document the results of their work in writing according to scientific principles.

[updated 26.02.2018]

Module content:

The Bachelor thesis is a project from the field of research, industry or business. It is of a theoretical, programming, empirical and/or experimental nature. Students must document their thesis (or collaboration) in the project. The application-oriented, industrial project aspect (project plan, project implementation, project result) of the thesis will be taken into account.

[updated 26.02.2018]

Recommended or required reading:

Will be specified by the supervisor resp. researched independently based on a specific topic.

[updated 26.02.2018]

Business Communication and Intercultural Competence

Module name (EN): Business Communication and Intercultural Competence

Degree programme: Applied Informatics, Bachelor, ASPO 01.10.2017

Module code: PIB-EN1

Hours per semester week / Teaching method: 2SU (2 hours per week)

ECTS credits: 2

Semester: 1

Mandatory course: yes

Language of instruction:

English/German

Assessment: Written exam

[updated 19.02.2018]

Curricular relevance:

KIB-ENG1 Computer Science and Communication Systems, Bachelor, ASPO 01.10.2017, semester 1, mandatory course

PIB-EN1 Applied Informatics, Bachelor, ASPO 01.10.2017, semester 1, mandatory course

Suitable for exchange students (learning agreement)

Workload:

30 class hours (= 22.5 clock hours) over a 15-week period. The total student study time is 60 hours (equivalent to 2 ECTS credits). There are therefore 37.5 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules): None.

Recommended as prerequisite for:

PIB-EN2 Technical Reading and Writing PIB-EN3 Professional Presentations

[updated 19.04.2021]

Module coordinator: Prof. Dr. Christine Sick

Lecturer: Dipl.-Übers. Betina Lang

[updated 19.04.2021]

Note:

The modules "Business Communication and Intercultural Competence", "Technical Reading and Writing", as well as "_Professional Presentations" should be seen in conjunction with one another. They offer students a framework to further develop their English language skills in a professionally related area from the desired entry level B1 to level B2.

About the "Business Communication and Intercultural Competence" module:

After successfully completing this module, students will have received insight into the differences in international working environments, especially in English-language working environments, and can describe professional tasks. They will be able to recognize potential difficulties and conflicts in intercultural communication situations and can draw conclusions for their own behaviour in international contexts. In this context, they will be able to use adequate means of speech and behaviour for specific oral communication situations. In addition, they will be sensitized to different language registers and can apply them adequately in given written communication situations with international business partners.

[updated 12.04.2018]

Module content:

- Greetings, introductions and small talk
- Describing job-related tasks
- Making phone calls in a professional context
- Correspondence with business partners

In addition, we will work on:

- Vocabulary
- Repeating relevant grammatical structures
- Raising awareness for functional language use
- Intercultural aspects

[updated 12.04.2018]

Teaching methods/Media:

Teaching and learning materials (print, audio, video), multimedia teaching and learning software for specific target groups

[updated 19.02.2018]

Recommended or required reading:

Students will receive a list of recommended teaching and learning materials. The following materials are free of charge for students of the htw saar. We recommend their use for independent learning:

Susanne Ley, Christine Sick: prep course English in m&eLanguageLearningPortal@CAS (e- and mobile learning offer to support students in English language learning at the Alt-Saarbrücken campus of the htw saar, Niveau A1-B1)

Christine Sick (2015): TechnoPlus Englisch VocabApp (Mobile-Learning-Angebot insbesondere zum Grundwortschatz, alle Niveaustufen), EUROKEY.

Christine Sick, unter Mitarbeit von Miriam Lange (2011): TechnoPlus Englisch 2.0 (Multimediales Sprachlernprogramm für Technisches und Business Englisch, Niveau B1-B2+), EUROKEY.

[updated 19.02.2018]

Module offered in: WS 2020/21, WS 2019/20, WS 2018/19, WS 2017/18

Business Economics

Degree programme: Applied Informatics, Bachelor, ASPO 01.10.2017

Module code: PIB-BWL

Hours per semester week / Teaching method: 4V (4 hours per week)

ECTS credits: 5

Semester: 1

Mandatory course: yes

Language of instruction:

German

Assessment:

Written exam

[updated 24.02.2018]

Curricular relevance:

PIB-BWL Applied Informatics, Bachelor, ASPO 01.10.2017, semester 1, mandatory course

Workload:

60 class hours (= 45 clock hours) over a 15-week period. The total student study time is 150 hours (equivalent to 5 ECTS credits). There are therefore 105 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules):

None.

Recommended as prerequisite for: PIB-WIN Business Informatics

[updated 18.10.2016]

Module coordinator: Prof. Dr.-Ing. André Miede

Lecturer: Prof. Dr.-Ing. André Miede

[updated 28.09.2016]

Learning outcomes:

After successfully completing this module, students will be able to name basic economic principles and in particular describe the interrelationships in and between companies and the principles applied in them.

Concepts In addition, students will be able to apply these interrelationships and concepts to the IT industry and explain their significance and importance for IT as a whole.

[updated 24.02.2018]

Module content:

- 1. Introduction and overview
- 2. Companies
- 3. Markets
- 4. Accounting
- 5. Financing
- 6. Organization and management
- 7. Selected business economics topics

[updated 24.02.2018]

Teaching methods/Media:

Transparencies, board, exercises, case studies, gamification

[updated 24.02.2018]

Recommended or required reading:

Jean-Paul Thommen, Ann-Kristin Achleitner: Allgemeine Betriebswirtschaftslehre, Springer. Thomas Straub: Einführung in die Allgemeine Betriebswirtschaftslehre, Pearson. Henner Schierenbeck, Claudia Wöhle: Grundzüge der Betriebswirtschaftslehre, Oldenbourg. Hans Jung: Allgemeine Betriebswirtschaftslehre, Oldenbourg. Jörg Wöltje: Buchführung Schritt für Schritt, utb. Als Ergänzung: Grady Klein, Yoram Bauman: The Cartoon Introduction to Economics Vol. 1 + Vol. 2, Hill and Wang.

[updated 24.02.2018]

Module offered in: WS 2020/21, WS 2019/20, WS 2018/19, WS 2017/18

Business Informatics

Module name (EN): Business Informatics
Degree programme: Applied Informatics, Bachelor, ASPO 01.10.2017
Module code: PIB-WIN
Hours per semester week / Teaching method: 3V+1U (4 hours per week)
ECTS credits: 5
Semester: 2
Mandatory course: yes
Language of instruction: German
Assessment: Written exam
[updated 24.02.2018]
Curricular relevance: PIB-WIN Applied Informatics, Bachelor, ASPO 01.10.2017, semester 2, mandatory course
Workload: 60 class hours (= 45 clock hours) over a 15-week period. The total student study time is 150 hours (equivalent to 5 ECTS credits). There are therefore 105 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules):

PIB-BWL Business Economics PIB-PR1 Programming 1

[updated 18.10.2016]

Recommended as prerequisite for:

Module coordinator: Prof. Dr.-Ing. André Miede

Lecturer: Prof. Dr.-Ing. André Miede

[updated 18.10.2016]

Learning outcomes:

After successfully completing this module, students will be able to apply the information technology and business management concepts they have learned so far. In particular, students will be able to name, explain and apply the basic concepts and methods of business informatics and apply them in general with regard to their use in business practice.

[updated 24.02.2018]

Module content:

- 1. Introduction
 - o Information systems
 - o Business informatics
- 2. Strategic and organizational aspects of information systems
- 3. Business processes and business process management
- 4. IT infrastructures
- 5. Data organization and data management
- 6. Application systems
- 7. Integration of information systems
- 8. Selected special topics
 - o IT security
 - o IT management
 - o Social, political and ethical aspects
 - o Current IT trends and their impact on information systems

[updated 24.02.2018]

Teaching methods/Media:

Presentation (transparencies/board), case studies, examples, exercises, gamification

[updated 24.02.2018]

Recommended or required reading:

Computer Architecture

Module name (EN): Computer Architecture	
Degree programme: Applied Informatics, Bachelor, ASPO 01.10.2017	
Module code: PIB-RAR	
Hours per semester week / Teaching method: 3V+1P (4 hours per week)	
ECTS credits: 5	
Semester: 2	
Mandatory course: yes	
Language of instruction: German	
Assessment: Written exam	
[updated 26.02.2018]	
Curricular relevance: PIB-RAR Applied Informatics, Bachelor, ASPO 01.10.2017, semester 2, mandatory course	
Workload: 60 class hours (= 45 clock hours) over a 15-week period. The total student study time is 150 hours (equivalent to 5 ECTS credits). There are therefore 105 hours available for class preparation and follow-up work and exam	preparation.
Recommended prerequisites (modules): None.	
Recommended as prerequisite for: PIB-MP Microprocessor Technology	
[updated 01.02.2018]	
Module coordinator: Prof. Dr. Steffen Knapp	
Lecturer: Prof. Dr. Steffen Knapp	
[updated 06.02.2020]	

After successfully completing this module, students will understand digital circuits (switching networks, switching devices) and will be able to analyze and design them. This practical course will help students acquire the necessary experience to develop and build important applications, especially in the field of computer technology.

Students will learn how digital computers are structured, organized and how they operate. They will be able to bring the architectural elements of a computer together, at register level, to create an example architecture. By understanding command processing, addressing techniques and concepts such as pipeline and cache, the participants will acquire the necessary knowledge to understand modern computer architectures.

[updated 26.02.2018]

Module content:

Part I:

- 1. Introduction
- 2. Combinational circuits
- 2.1 Basics
- 2.2 Normal forms
- 2.3 Minimization of switching functions
- 2.4 Examples
- 3. Sequential circuits
- 3.1 Flip flops
- 3.2 Registers, shift registers
- 3.3 Counters
- 3.4 Examples

Part II:

- 1. Representing numbers in the computer
- 2. Von Neumann architecture
- 3. Memory components
- 4. Sequential control
- 5. Microprogramming
- 6. Instruction set architecture
- 7. Interrupt handling
- 8. RISC processors
- 9. Pipelining
- 10. Cache

[updated 26.02.2018]

PIB-RN Applied Informatics, Bachelor, ASPO 01.10.2017, semester 4, mandatory course

Workload:

60 class hours (= 45 clock hours) over a 15-week period. The total student study time is 150 hours (equivalent to 5 ECTS credits). There are therefore 105 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules): None.

Recommended as prerequisite for: PIB-PRA Work Experience Phase PIB-VS Distributed Systems

[updated 15.01.2020]

Module coordinator: Prof. Dr. Steffen Knapp

Lecturer: Prof. Dr. Steffen Knapp

[updated 19.01.2021]

After successfully completing this course, students will be familiar with the functionality and data structures of the basic Internet protocol families between LAN and application level. They will be able to describe the communication in a TCP/IP computer network and use this knowledge for troubleshooting.

[updated 26.02.2018]

Module content:

- 1. Computer communication
- 1.1. Models
- 1.2. LAN
- 1.3. IP/ICMP
- 1.4. UDP
- 1.5. TCP

2. Selected application layer Internet protocols

3. Using network tools

PIB-DB Applied Informatics, Bachelor, ASPO 01.10.2017, semester 3, mandatory course

Workload:

60 class hours (= 45 clock hours) over a 15-week period. The total student study time is 150 hours (equivalent to 5 ECTS credits). There are therefore 105 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules): PIB-INF1 Informatics 1 PIB-MA1 Mathematics 1 PIB-PR1 Programming 1

[updated 27.10.2016]

Recommended as prerequisite for: PIB-PA Project work PIB-PRA Work Experience Phase PIB-WEB Principles of Web Development

[updated 02.10.2017]

Module coordinator: Prof. Dr. Klaus Berberich Lecturer: Prof. Dr. Klaus Berberich

[updated 28.09.2016]

Learning outcomes:

After successfully completing this module, students will be able to use relational database systems in practice. To do so, they will learn data modelling techniques and be able to apply them to problems in real life. Students will understand the relational model and relational algebra as the mathematical foundations of relational database systems. They will be capable of deriving a relational schema from a modelled section from the real world. Students will be able to assess its quality on the basis of relational normal forms (1NF, 2NF, 3NF) and improve it if necessary by converting it into a higher normal form. They will also be able to formulate concrete information requirements as expressions of relational algebra. Students will be familiar with the essential commands of the Structured Query Language (SQL) and can use them to change the schema of a database and the data stored in it. In addition, they will also be able to express a given need for information as a query in SQL and to understand and communicate a given SQL query. Students will understand the central concept of the transaction and can define each of the ACID properties and illustrate them with examples. They will be able to name different types of indexes in relational database systems and can use them depending on the situation. In order to solve more complex problems with the help of a relational database system, students will be familiar with the basic language components of procedural extensions (e. g. Oracle PL/SQL and Microsoft TransactSQL) of SQL. In addition, students will be familiar with interfaces (e. g. ODBC and JDBC) for accessing a relational database system from an application. They will be capable of accessing an existing relational database from a programming language known to them (e.g. Java or C) by means of these interfaces. Finally, students will know alternatives to relational databases (e.g. document-oriented databases and graph databases) and can name differences.

[updated 19.02.2018]

Module content:

- 1. Introduction
- 2. Database design
- 3. Relational model and relational algebra
- 4. Structured Query Language (SQL)
- 5. Relational design theory
- 6. Data integrity
- 7. Transaction management
- 8. Database tuning
- 9. Security aspects
- 10. Programming with SQL
- 11. Database interfaces
- 12. NoSQL

[updated 19.02.2018]

Teaching methods/Media:

Transparencies, script, example databases in SQLite and Microsoft SQL Server, practical and theoretical exercises.

Distributed Systems

Module name (EN): Distributed Systems	
Degree programme: Applied Informatics, Bachelor, ASPO 01.10.2017	
Module code: PIB-VS	
Hours per semester week / Teaching method: 2V+2P (4 hours per week)	
ECTS credits: 5	
Semester: 5	
Mandatory course: yes	
Language of instruction: German	
Assessment: Oral examination (50%,), project work (50%)	
[updated 24.02.2018]	
Curricular relevance: PIB-VS Applied Informatics, Bachelor, ASPO 01.10.2017, semester 5, mandatory course	
Workload: 60 class hours (= 45 clock hours) over a 15-week period. The total student study time is 150 hours (equivalent to 5 ECTS credits).	

The total student study time is 150 hours (equivalent to 5 ECTS credits). There are therefore 105 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules):

PIB-BS Operating Systems PIB-PR2 Programming 2 PIB-RN Computer Networks

[updated 15.01.2020]

Recommended as prerequisite for:

Module coordinator: Prof. Dr. Markus Esch

Lecturer: Prof. Dr. Markus Esch

[updated 15.01.2020]

After successfully completing this module, students will be able to name the properties of distributed systems and will be able to describe important concepts of distributed systems. They will be able to recognize the inherent complexity of distributed systems and the importance of protocol definitions and architectures at application level.

Students will be able to apply common programming techniques and current technologies for the development of distributed systems. In addition, they will be capable of analyzing the properties of different architectural approaches against the background of the requirements for a distributed system and of deriving approaches from them independently.

Through project work, students will be able apply project management methods in project groups of up to six people.

[updated 24.02.2018]

Module content:

- Characteristics of distributed systems
- Architecture of distributed systems
- Interprocess communication in distributed systems
- o Client/server programming
- o Socket programming
- o Remote procedure calls
- o Java RMI
- o SOAP web services
- o REST web services
- Error tolerance

Lecturer: Prof. Dr. Klaus Berberich

[updated 28.09.2016]

After successfully completing this module, students will be able to formulate and analyze algorithms for solving simple problems. They will understand how numbers and characters are represented in a computer. They will be capable of converting between and computing in the underlying numeral systems. Students will be familiar with the basic concepts and rules of predictive logic and can apply them to determine the equivalence of two expressions. On the basis of the machine model Random Access Machine (RAM), students will learn the basic operations of a computer. They will be able to implement simple programs with the RAM commands, prove their correctness and determine their time and space complexity. Students will become familiar with basic algorithms (e. g. for searching and sorting) and will be able to combine them like building blocks to solve more complex problems. Based on these fundamental algorithms, students will be able to understand important solution strategies (e. g. divide and conquer algorithm, recursion and dynamic programming). Students will also learn about elementary data structures (e. g. linked lists and binary heaps) and will be able to use them appropriately depending on the situation.

[updated 24.02.2018]

Module content:

- 1. Introduction
- 2. Mathematical principles
- 2.1 Number systems
- 2.2 Boolean algebra
- 3. RAM as a machine model
- 3.1 Components
- 3.2 Program correctness
- 3.3 Program runtime
- 4. Algorithms
- 4.1 Pseudocode from a high-level programming language
- 4.2 Searching
- 4.3 Sorting
- 5. Data structures
- 5.1 Dynamic arrays
- 5.2 Linked lists
- 5.3 Binary heaps
- 5.4 Binary search trees
- 5.5 Hash tables

[updated 24.02.2018]

Teaching methods/Media:

Slides, RAMses as an interactive tool for learning RAM commands, theoretical exercises.

Lecturer: Prof. Dr. Klaus Berberich

[updated 28.09.2016]

After successfully completing this module, students will be familiar with basic problems on undirected and directed graphs, as well as character strings. They will be able to define and differentiate basic terms from the graph theory. Students will be aware of the relevance of graph problems (e. g. topological sorting) for solving practical tasks (e. g. scheduling). They will be able to use efficient algorithms for solving basic problems on graphs and strings. For their description and analysis, students use the skills acquired in the "Informatics 1" module. Students will also be capable of formulating a given practical task as a problem and of solving it by applying the algorithms they have learned.

[updated 24.02.2018]

Module content:

1. Introduction

- 2. Searching and sorting
- 2.1 Breadth-first search
- 2.2 Depth-first search
- 2.3 Topological sorting
- 3. Shortest paths
- 3.1 Bellman-Ford algorithm
- 3.2 Dijkstra 's algorithm
- 3.3 Floyd-Warshall algorithm

4. Components and spanning trees

- 4.1 Determining connected components
- 4.2 Kruskal's algorithm
- 4.3 Prim's algorithm
- 5. Algorithms for character strings
- 5.1 Pattern matching
- 5.2 Longest common strings
- 5.3 Levenshtein distance

[updated 08.11.2017]

After successfully completing this module, students will be able to use Unix/Linux systems effectively and professionally to solve IT problems.

In particular, they will be able to use shell scripts based on their knowledge of the many Unix/Linux commands and their connectivity to automate such solutions and make them portable within the Unix/Linux world.

[updated 26.02.2018]

-

Module content:
_ Unix/Linux basics
o The file system
o The access rights system (files, processes)
o The Unix Input/Output concept
o Help for self-help, manual pages, etc.
_ The shell as a command-line interpreter
o General command-line structure
o Metacharacters and quotes
o System and environment variables
o Customizing the shell environment (profiles)
o Grouping commands
_ The 20 most important commands
_ Shell programming, shell scripts
o Control structures
o Variables and parameters
o Arithmetic and regular expressions

- o Structure of shell scripts and their development
- Program development and prototyping tools
- o From make to awk
- _ Network tools
- o From ip to ssh

Module coordinator: Prof. Dr. Peter Birkner

Lecturer: Prof. Dr. Peter Birkner

[updated 28.09.2016]

Students will learn basic mathematical concepts from the areas of predictive logic, sets and figures and

be able to use them confidently when formulating mathematical statements. Students will be able to reproduce basic formulas from the field of combinatorics and use these to develop solutions

for combinatoric problems.

They will be capable of explaining the mathematical proof concepts of direct proof, indirect proof and complete induction and thus,

come up with new evidence.

They will be able to enumerate the axioms of the algebraic structures group, ring and field and check the corresponding properties for structures with given operations.

Students will learn the terms and statements of group theory and be able to identify them in examples of groups,

such as (Z/mZ, +) and $((Z/pZ)\setminus\{0\}, *)$.

They will be able to explain vector space axioms and demonstrate them in Euclidean space.

Students will be able to develop solutions in Euclidean space for geometrical problems using vector algebra, the dot product,

the vector product and the triple product.

They will be able to explain basic concepts of the theory of n-dimensional vector spaces.

They will have mastered elementary matrix calculation rules and determinant calculation rules and learn how linear images

can be represented and handled using matrices.

Students will be able to demonstrate how to solve a linear system and learn to master the Gauss algorithm

as a method for solving linear systems.

Finally, students will gain an insight into the manifold applications of mathematics in computer science (the development of programming languages,

program verification, digital technology, computing accuracy on computers, cryptography, computer graphics_).

[updated 19.02.2018]

Module content:

Basic mathematical terms Propositional logic, first-order logic, sets, especially uncountably infinite sets Relations, especially equivalence relations, partitions, functions Algebraic structures Semigroups, monoids Groups, subgroups, normal subgroups, quotient groups, homomorphisms Rings, fields, in particular Z/mZ Natural numbers, mathematical induction, recursion Peano axioms Mathematical induction Recursive definitions Binominal coefficients and binomial formulae Basic concepts of combinatorics (with quantitative considerations) Elementary vector calculation in Euclidean space Vector algebra, linear independence, dimension Vectors in coordinate systems, dot product, vector product, triple product Geometric applications Vectors in n-dimensional space Generating sets, basis, subspaces Linear functions, image space, core Representation of linear functions with matrices Geometric applications: projections, reflections, rotations Matrices and linear systems Linear systems, Gaussian elimination Square matrices, matrix inversion, determinants, Cramer's rule

[updated 28.09.2016]

_ After successfully completing this module, students will be familiar with the definition of the term
limit for sequences and real functions and will
have learned to master the use of limit theorems.
_ They will know the convergence criteria for series and be able to handle them confidently when
checking series for convergence.
_ They will be able to explain the importance of series expansion for numerical mathematics and
computer science applications.
_ Students will be familiar with the properties of exponential and logarithmic functions and be able to
deal with them confidently
in computer science applications.
_ They will know the definition of derivation for functions of a variable as a limit value and
will have learned to master the derivation rules for functions of a variable.
_ Students will be able to develop solutions for the application of differential calculus (setting limits with
_L'Hospital's rule, extreme value tasks, Taylor series
and error estimation).
_ They will be familiar with the definition of definite and indefinite integrals for variable functions, as
well as
be able to develop integration solutions using the integration methods _partial integration_ and
_integration by substitution
_ Finally, they will have learned to master complex numbers in the usual forms for representation.

[updated 13.11.2016]

After successfully completing this module, students will be able to explain the reasons for the inaccuracies that often arise when calculating with computers and know basic methods for estimating these inaccuracies.

- Students will know basic iteration techniques for solving application problems using computers.
- They will be able to process and solve elementary combinatorial and probabilistic tasks with the help of an introduction to probability calculus.
- Students will develop the ability to analyze real or planned systems by abstracting practical discrete mathematics tasks from the field of IT into mathematical structures.
- Students will be able to use elementary methods of number theory in cryptographic applications and coding.

[updated 24.02.2018]

Module content:

Numerical mathematics

Representation of numbers in computers, errors, rounding errors, error propagation Bisection method

Iterative methods, Banach fixed-point theorem, a priori estimates

Newton's method

Probability calculus

The concept of "probability"

Conditional probability and independent events

Urn experiments

Random variables and distribution functions

Expected value and variance

Discrete distribution, Poisson distribution, normal (or Gaussian) distribution

Discrete Mathematics

Primitive recursive functions and $\boldsymbol{\mu}$ recursive functions

Elementary number theory

Finite fields

Principles of cryptography

Principles of the coding theory

Microprocessor Technology

Module name (EN): Microprocessor Technology
Degree programme: Applied Informatics, Bachelor, ASPO 01.10.2017
Module code: PIB-MP
Hours per semester week / Teaching method: 2V+2P (4 hours per week)
ECTS credits: 5
Semester: 5
Mandatory course: yes
Language of instruction: German
Assessment: Written exam (50%), practical course (50%)

[updated 26.02.2018]

Curricular relevance:

PIB-MP Applied Informatics, Bachelor, ASPO 01.10.2017, semester 5, mandatory course

Workload:

60 class hours (= 45 clock hours) over a 15-week period. The total student study time is 150 hours (equivalent to 5 ECTS credits). There are therefore 105 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules):

PIB-RAR Computer Architecture

[updated 01.02.2018]

Recommended as prerequisite for:

Module coordinator:

Prof. Dr.-Ing. Jürgen Schäfer

Lecturer: Prof. Dr.-Ing. Jürgen Schäfer

[updated 28.09.2016]

Learning outcomes:

After successfully completing this module, students will have understood the structure and operation of a microcontroller with peripheral components based on the example of a modern RISC architecture. Through programming exercises, they will be able to create programs in Assembler and C for selected problems.

[updated 26.02.2018]

Module content:

- 1. The architecture of ARM7
- 2. The ARM7 Programming Model
 - 2.1 The ARM Instruction Set
 - 2.2 Addressing modes
 - 2.2.1 Pre-indexed and post-indexed addressing
 - 2.2.2 Direct addressing
 - 2.4 Assembler directives
 - 2.4.1 Symbol definition
 - 2.4.2 Memory initialization/reservation
 - 2.4.3 Memory allocation
 - 2.5 Special operating modes
 - 2.5.1 Interrupt vectors
 - 2.5.2 System boot after reset
- 3. The LPC2000 Processor Family
 - 3.1 Memory partitioning
 - 3.2 Vectored interrupts
 - 3.3 Peripheral components
- 4. Microcontroller C-programming
 - 4.1 Procedure when starting the C application
 - 4.2 Attributes for variables
- 5. Digital in and output
- 6. Configuring port pins
- 7. External interrupts
- 8. The Vectored Interrupt Controller (VIC)
- 9. Timer
- 10. Serial data transmission

Professional Presentations

Module name (EN): Professional Presentations

Degree programme: Applied Informatics, Bachelor, ASPO 01.10.2017

Module code: PIB-EN3

Hours per semester week / Teaching method: 2SU (2 hours per week)

ECTS credits: 2

Semester: 3

Mandatory course: yes

Language of instruction:

English/German

Assessment: Written exam

[updated 19.02.2018]

Curricular relevance:

KIB-ENG3 Computer Science and Communication Systems, Bachelor, ASPO 01.10.2017, semester 3, mandatory course PIB-EN3 Applied Informatics, Bachelor, ASPO 01.10.2017, semester 3, mandatory course

Suitable for exchange students (learning agreement)

Workload:

30 class hours (= 22.5 clock hours) over a 15-week period. The total student study time is 60 hours (equivalent to 2 ECTS credits). There are therefore 37.5 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules): PIB-EN1 Business Communication and Intercultural Competence PIB-EN2 Technical Reading and Writing

[updated 19.04.2021]

Recommended as prerequisite for:

Module coordinator: Prof. Dr. Christine Sick

Lecturer: Dipl.-Übers. Betina Lang

[updated 19.04.2021]

Note:

The modules "Business Communication and Intercultural Competence", "Technical Reading and Writing", as well as "Professional Presentations" should be seen in conjunction with one another. They offer students a framework to further develop their English language skills in a professionally related area from the desired entry level B1 to level B2.

About the "Professional Presentations" module:

After successfully completing this module, students will understand strategies for the creation of professional, subject-specific presentations in English. They will be able to structure English-language presentations and use the verbal expressions they have mastered in them. In doing so, they will continue to develop their understanding of the functional use of language.

With regard to job application processes, students will be given the opportunity to prepare their application documents in English, apply and practice interview strategies and develop their intercultural awareness.

[updated 12.04.2018]

Module content:

Presentations

- Strategic knowledge
- Structure of a presentation in English
- Structures for linguistic implementation
- Describing tools, numbers, cause and effect correlations, and trends

Applying for a job

- Job advertisement
- Application documents
- Job interview

In addition, we will work on: Vocabulary Repeating relevant grammatical structures Intercultural competence Raising awareness for functional language use

[updated 12.04.2018]

Teaching methods/Media:

Teaching and learning materials (print, audio, video), multimedia teaching and learning software for specific target groups

[updated 19.02.2018]

Recommended or required reading:

Students will receive a list of recommended teaching and learning materials. The following materials are free of charge for students of the htw saar. We recommend their use for independent learning:

Christine Sick (2015): TechnoPlus Englisch VocabApp (Mobile learning offer, especially for basic vocabulary, all levels), EUROKEY.

Christine Sick, unter Mitarbeit von Miriam Lange (2011): TechnoPlus Englisch 2.0 (Multimediales Sprachlernprogramm für Technisches und Business Englisch, Niveau B1-B2+), EUROKEY.

[updated 25.07.2017]

Learning outcomes:

After successfully completing this module, students will:

- _ be proficient in the basic language elements (data types, expressions, control structures) of Java.
- _ have grasped the concepts of object orientation (classes, objects, inheritance, polymorphism) and be able to implement them.
- _ be able to apply the concept of exception handling in programs that they have developed themselves.
- _ be able to use basic classes of the Java API (for example, strings, input/output, exception classes).

_ be able to develop algorithms for simple problems in small teams and implement them in a wellstructured manner.

[updated 24.02.2018]

Module content:

After an introduction to the basic elements of programming languages, we will focus on object-oriented programming and its application. Students will learn using the Java programming language and deepen their knowledge practical exercises.

- 1. Introduction to programming languages in general
- 2. Java introduction and overview
- 3. Object-oriented programming (Part 1)
- 4. Basic elements of the Java language
- 5. Object-oriented programming (Part 2)
- 6. Data types and variables
- 7. Expressions and operators
- 8. Control structures
- 9. Reference types
- 10. Classes and objects
- 11. Inheritance
- 12. Exception handling
- 13. In/output
- 14. Dynamic data structures
- 15. The Collection API

Lecturer:

Prof. Dr. Markus Esch Dipl.-Inf. Christopher Olbertz Dipl.-Ing. Wolfgang Pauly Dipl.-Ing. Achim Pick Dipl.-Inf. Regina Piontek

[updated 25.09.2017]

Learning outcomes:

This module is based on the "Programming 1" module and will help students deepen their knowledge and understanding of object-oriented programming.

After successfully completing this module, students will be able to explain and apply advanced concepts of object-oriented programming in Java. They will be able to design and implement object-oriented solutions.

Based on the theoretical knowledge of data structures from the Informatics 1 module, students will be able to implement and apply different data structures. In addition, they will also be able to select the data structure that is most suitable for an application scenario.

In addition to deepening their knowledge of object-oriented programming, students will learn the basic concepts of the programming language C. They will be able to name the concepts and characteristics of imperative programming in C. Students will be able to explain the differences, as well as the advantages and disadvantages of object-oriented and type-safe languages such as C and will be able to apply this knowledge to the implementation of C programs.

Within the framework of practical exercises, students will learn to work together in small groups.

[updated 24.02.2018]

Module content:

- Advanced object-oriented programming concepts in Java
- o Recursion
- o Generics
- o Annotations
- o Reflection
- o Lambda expressions
- o Implementation aspects of trees, graphs and lists
- o Java Collections Framework
- o Streams
- C programming
- o The structure of a C program
- o Expressions, operators, control structures and functions
- o Basic and structured data types
- o Pointers and pointer arithmetic
- o Storage management
- o Preprocessors, compilers, linkers, debuggers, make
- o Using libraries
- o Complex data structures in C

[updated 28.09.2016]

After successfully completing this module, students will:

- be able to program an application with a graphical user interface and database connection.
- understood the meaning of easy-to-read code and are able to implement what they have learned.
- can achieve versioning with Git

- understand the importance of good architecture for software and will be able to implement the architecture presented in the lecture.

- understand Java's internationalization mechanism and be able to internationalize their programs.

[updated 24.02.2018]

Module content:

1. Basic concepts of graphical user interfaces with Swing as an example for a well-known Java framework

- Simple GUI applications
- Layout management with Swing
- Event handling
- Menus
- Dialogs
- Tables with JTable
- Internationalization
- 2. Connecting databases
- JDBC
- Introduction to Hibernate as an O/R mapper
- 3. JavaFX as a modern GUI framework for Java
- Structure of a JavaFX application
- Lambda expressions
- Event handling
- Collections
- Important components of JavaFX
- Styling with CSS
- 4. Robust object-oriented programming style
- Architectures for large software with a graphical user interface and database connection
- Checked and unchecked exceptions in Java
- Interface-based programming
- Introduction to Spring
- New features in Java 8
- Clean code

[updated 15.11.2016]

After successfully completing this course, students will be able to reconstruct the project planning for typical and manageable student IT projects in functional project management.

They will be capable of independently implementing an adequate form of project organization and exercising project governance during the continuous project development cycle. They will be able to recognize deviations from the plan and adjust project planning accordingly.

Students will learn to use basic project management tools, i. e. they can create work-breakdown structures, map workflows with the precedence diagram method and understand the consequences of plan changes.

They will learn to prepare and conduct meetings and to communicate their information and the results for efficient project control.

Students will become familiar with estimation processes for IT projects and know how to use them in such projects in order to stabilize project planning.

They will develop an understanding of how to work in project teams and assume project management functions.

[updated 02.10.2017]

After successfully completing this course, students will:

_ have gained the knowledge and experience necessary to conceive, plan and execute a practical project.

_ have learned the methods and procedures required for each phase of a project in medium-sized teams (6-to 10 students).

_ have gained experience in leading a team, team work and conflict management.

[updated 24.02.2018]

Module content:

Students will apply their knowledge from the fields of software engineering, programming and databases in an IT-related project under the supervision of lecturers from their respective subjects. The project work will integrate different methods/work techniques such as for example, project management, team work, the creation of documentation and the presentation of results. A seminar accompanies this project work course. Within the framework of the seminar, each student is required to give a lecture of at least 30 minutes on a technical or project-related topic.

PIB-WA Applied Informatics, Bachelor, ASPO 01.10.2017, semester 4, mandatory course

Workload:

30 class hours (= 22.5 clock hours) over a 15-week period. The total student study time is 60 hours (equivalent to 2 ECTS credits). There are therefore 37.5 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules):

PIB-INF1 Informatics 1 PIB-INF2 Informatics 2

[updated 01.03.2019]

Recommended as prerequisite for:

Module coordinator: Prof. Dr.-Ing. André Miede

Lecturer: Prof. Dr. Klaus Berberich Prof. Dr. Peter Birkner

[updated 01.03.2019]

Learning outcomes:

After successfully completing this module, students will be able to describe and explain how scientific work works, especially in computer science. In doing so, they will be able to use their knowledge to carry out searches and document arguments in writing as well as with the help of quotations. In addition, students will be able to use the most common scientific documentation tools.

[updated 24.02.2018]

Module content:

Methodical and technical basics will first be taught and then intensified through practical exercises. Exams will be conducted parallel within the framework of the exercises, which students will work on independently.

- 1. Principles of science
- 2. Forms of science in Informatics
- 3. Scientific activity in Informatics
- 4. Research: goals, methodology, sources
- 5. Arguing and quoting
- 6. Tools for scientific documentation
- 7. Articulating scientific results
- 8. Selected special topics

[updated 24.02.2018]

Teaching methods/Media:

Transparencies, projector, board, discussions, theoretical and practical exercises

[updated 24.02.2018]

mandatory course

PIB-SE Applied Informatics, Bachelor, ASPO 01.10.2017, semester 4, mandatory course

Workload:

60 class hours (= 45 clock hours) over a 15-week period. The total student study time is 150 hours (equivalent to 5 ECTS credits). There are therefore 105 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules): None.

Recommended as prerequisite for:

Module coordinator: Prof. Dr. Damian Weber

Lecturer: Prof. Dr. Damian Weber

[updated 28.09.2016]

After successfully completing this module, students will be familiar with the critical parts, procedures and audit-relevant data of an operating system.

An open source UNIX system will be used in order to be able to comprehensively analyze processes, security gaps and system calls in detail. The knowledge of these components and their weak points will enable the students to pursue a security-by-design approach for new application systems or the configuration

of operating systems, which prevents vulnerabilities from the outset.

This includes basic knowledge of current cryptography methods. Students will learn to integrate the social necessity of data protection and privacy protection in communication processes into their future concepts.

[updated 26.02.2018]

Module content:

- 1. Security terms, threat model, examples
- 2. Identities, authentication, authorization
- 3. Encryption (symmetric, asymmetric)
- 4. Cryptographic hash functions, message authentication codes
- 5. UNIX from a security perspective
- 6. Auditing, system status, system statistics
- 7. Network security, perimeter security
- 8. Penetration tests

[updated 27.07.2018]

After successfully completing this module, students will:

_ be familiar with the most important current process models in software development and will be able to explain their particularities and differences.

_ be familiar with the problems in requirements analysis and, as a team, be able to create requirement specifications when given simple to medium fuzzy problem descriptions.

_ be proficient in the basic concepts of object-oriented analysis and can analyze and structure simple to medium-sized software development problems and model solutions using UML diagrams.

_ be familiar with some of the most important architectural and design patterns in software development and be able to explain them in detail.

_ be able to analyze tasks in teamwork and create solutions with the skills and tools learned.

[updated 26.02.2018]

Module content:

Students will be given an overview of sub-areas in software technology. They will get to know both classical and object-oriented process models in software development. The lecture will focus on object-oriented analysis and design. The most important diagrams from the Unified Modeling Language UML) will be applied and practiced with the help of practice-oriented examples, exercises and an OOA/D tool.

- 1. Introduction to and overview of software engineering
- 2. Process models
- 2.1. Waterfall model
- 2.2. V-Modell 97 and XT
- 2.3. Iterative incremental software development
- 2.3. Spiral model
- 2.4. Rational Unified Process
- 2.5. Agile process models

3. Details of process models

- 3.1 Feasibility study/functional specifications
- 3.2 Requirement analysis/technical specifications
- 3.3 Cost estimation
- 4. Static concepts of object-oriented analysis
- 4.1. Basic OO concepts
- 4.2. Static concepts
- 4.3. Class diagrams
- 5. Dynamic concepts of object-oriented analysis
- 5.1. Use cases and use case diagrams
- 5.2. Activity diagrams
- 5.3. Scenarios and sequence diagrams
- 5.4. State machines
- 5.5. Procedure for an analysis process
- 5.6. Analysis patterns
- 6. Design phase
- 6.1. Introduction to object-oriented design
- 6.2. Introduction and overview
- 6.3. Essential GoF patterns
- 7. Introduction to Software Quality Management
- 7.1. Introduction and overview
- 7.2. Software tests

Suitable for exchange students (learning agreement)

Workload:

30 class hours (= 22.5 clock hours) over a 15-week period. The total student study time is 60 hours (equivalent to 2 ECTS credits). There are therefore 37.5 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules): PIB-EN1 Business Communication and Intercultural Competence

[updated 19.04.2021]

Recommended as prerequisite for: PIB-EN3 Professional Presentations

[updated 19.04.2021]

Module coordinator: Prof. Dr. Christine Sick

Lecturer: Dipl.-Übers. Betina Lang

[updated 19.04.2021]

Note:

The modules "Business Communication and Intercultural Competence", "Technical Reading and Writing", as well as "Professional Presentations" should be seen in conjunction with one another. They offer students a framework to further develop their English language skills in a professionally related area from the desired entry level B1 to level B2.

About the "Technical Reading and Writing" module:

After successfully completing this module, students will be familiar with different reading strategies and will be able to apply them to course-specific specialist texts. They will have extended their repertoire of linguistic structures and will be able to apply these structures to the written elaboration of technical questions and documents.

[updated 12.04.2018]

Module content:

- General and detailed comprehension of course-specific specialist texts
- Techniques for taking notes
- Summarizing texts
- Describing for example, program actions, program functions, instructions, etc.
- Cause-effect relationships

In addition, we will work on:

- Vocabulary
- Repeating relevant grammatical structures

[updated 12.04.2018]

Teaching methods/Media:

Teaching and learning materials (print, audio, video), multimedia teaching and learning software for specific target groups

[updated 19.02.2018]

Recommended or required reading:

Students will receive a list of recommended teaching and learning materials. The following materials are free of charge for students of the htw saar. We recommend their use for independent learning:

After successfully completing this module, students will:

- _ be able to apply the skills and knowledge acquired during their studies to project tasks in a company.
- _ have learned to familiarize themselves with a new working environment.
- $_$ have solved concrete, the matically focused problems in a company.
- _ have gained actual practical insight into the role of computer scientists in a company.
- _ be familiar with the organizational structure of a company.

[updated 26.02.2018]

Module content:

Together, the student, their university supervisor and the company where the internship is carried out will determine the topics to be worked on by the student during his or her internship. The work done during the internship should prepare students for the bachelor thesis to be written afterwards

Each student will write a report of approx. 8-10 DIN A4 pages about the work done during their internship and describe their practical experience.

In addition, they are required to give a short lecture on the contents of his practical phase.

[updated 26.02.2018]

Suitable for exchange students (learning agreement)

Workload:

60 class hours (= 45 clock hours) over a 15-week period. The total student study time is 120 hours (equivalent to 4 ECTS credits). There are therefore 75 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules): None.

Recommended as prerequisite for:

Module coordinator: Prof. Dr. Martin Löffler-Mang

Lecturer: Prof. Dr. Martin Löffler-Mang

[updated 10.11.2016]

Learning outcomes:

After successfully completing this module, students will be able to analyze and evaluate global challenges. They will have acquired new working techniques that will help them develop innovative and technical visions for the future. They will be familiar with the most important basic concepts of conscious communication and discussions in interdisciplinary work. They can present and document work results in an appropriate manner. In addition, students will have expanded their intercultural and foreign language skills through work in international teams.

[updated 19.02.2018]

Module content:

Students will discuss the challenges of today's world and develop technical visions for what they believe life on earth will be like in 10 to 50 years. In international project groups, they will develop and discuss their own technical visions from fields such as bionics, mechatronics, nanotechnology, intelligent materials, renewable energies, optical technologies and information technologies (selection) for a sustainable life on earth.

[updated 24.02.2018]

Teaching methods/Media:

The initial phase will focus on inspiring, future-oriented lectures by our speakers on technical topics of the future. The goal of these lectures is to motivate the students and inspire their conceptual work. The lectures will be accompanied by workshops on creative techniques (brainstorming, mind mapping, World Café etc.) and team building.

During the main phase, students will work autonomously in groups supported by mentors (lecturers from our partner universities). At the end of each day, together with the lecturers, he students will reflect on their own results, as well as those from the other groups.

The intensive program will end with a presentation and self-assessment of each group's results in the form of a marketplace.

After successfully completing this module, students will have developed an understanding of how information is generated and distributed within a vehicle.

Students will be able to name the advantages and disadvantages of bus systems, as well as the various fields of application

where bus systems are normally used.

In addition, students will be able to list the data typically generated in modern vehicles and the connections between this data and assistance systems. Students will be aware of the fundamental problems of automated driving and its connection with telematics systems.

Students will be capable of demonstrating the basic motivation behind Cooperative Intelligent Transports Systems (C-ITS). They will be able to

reconstruct the basic standardization use cases and explain how messages are structured using given scenarios. Students will be capable of solving routing problems by calculating the best propagation path. Lastly, they will be able to explain how information from vehicle bus systems is used in the context of automated driving.

[updated 26.02.2018]

Module content:

This course will give students an insight into automotive engineering and explain how data is generated and communicated in this field.

- 1. Overview of different bus systems, in particular CAN
- 2. Introduction to driver assistance systems
- 3. Introduction to automated driving
- 4. Introduction to V2X communication
- 5. V2X communication use cases
- 6. Protocols and algorithms in V2X communication

Workload:

30 class hours (= 22.5 clock hours) over a 15-week period. The total student study time is 60 hours (equivalent to 2 ECTS credits). There are therefore 37.5 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules): None.

Recommended as prerequisite for:

Module coordinator:

Prof. Dr.-Ing. Dietmar Brück

Lecturer: Prof. Dr.-Ing. Dietmar Brück

[updated 10.11.2016]

Learning outcomes:

After successfully completing this module, students will be familiar with the legal regulations that apply to vocational training and can implement them responsibly. They will have all of the knowledge necessary for the successful completion of the instructor qualification test at the Chamber of Industry and Commerce (IHK). Students will be capable of training young people in a company in accordance with legal, technical and organizational guidelines and helping their trainees successfully complete their training.

[updated 26.02.2018]

Module content:

- Planning and testing vocational training requirements
- Preparing vocational training and participating in the recruitment of trainees
- Carrying out vocational training
- Completing vocational training

Recommended prerequisites (modules): None.

Recommended as prerequisite for:

Module coordinator: Prof. Dr. Thomas Tinnefeld

Lecturer: Prof. Dr. Thomas Tinnefeld

[updated 15.01.2020]

- Advanced introduction to Pinyin, the phonetic Chinese alphabet
- Ability to understand simple dialogues
- Ability to communicate in basic contexts for the purpose of exchanging information
- Development of basic reading skills with regard to narrowly defined thematic contexts
- Development of skills for the writing texts in Pinyin
- Ability to recognize Chinese characters and translate them into Pinyin

- Ability to transcribe narrowly defined texts in Chinese script using appropriate computer software (optional)

- Development of a basic understanding of Chinese grammar
- Awareness of fundamental differences between the target and source cultures

[updated 05.10.2020]

Module content:

- Repetition and consolidation of basic greetings
- Consolidation of Hanyu-Pinyin
- In-depth introduction to written Chinese (radicals and writing direction)
- Detailed presentation of yourself and your family in Chinese

- Dealing with basic grammatical phenomena (e.g. word order in a statement, sentences with adjective and verbal predicate, questions with and without a question word)

- Awareness for the Chinese culture (e.g. Chinese festivities)
- Ordering food and drinks in a restaurant

[updated 05.10.2020]

Teaching methods/Media:

- Presentations by the lecturer
- Partner work
- Group work phases where work assignments will be completed by the students
- Multimedia language lab
- Short presentations by the students
- Internet research

[updated 05.10.2020]

Recommended or required reading:

- Listening comprehension texts (audio and/or video)
- Internet resources
- Subject-related multimedia programs
- Additional materials on vocabulary and grammar
- Textbook: New Practical Chinese Reader. Textbook (Chinese-English Version). Vol.1. Lessons 1-6. Beijing: Beijing Language and Culture University Press

Workload:

30 class hours (= 22.5 clock hours) over a 15-week period. The total student study time is 60 hours (equivalent to 2 ECTS credits). There are therefore 37.5 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules): None.

Recommended as prerequisite for:

Module coordinator: Prof. Dr. Thomas Tinnefeld

Lecturer: Prof. Dr. Thomas Tinnefeld

[updated 21.06.2012]

Learning outcomes:

- Introduction to Pinyin, the phonetic Chinese alphabet

- Training of basic listening comprehension skills in relation to lexemes and idiomatic expressions discussed in the course

- Ability to communicate in narrowly defined situational contexts such as greeting someone, providing personal information or introducing one's own family

- Ability to recognize contextually validated Chinese lexemes and expressions in Pinyin

- Development of a basic understanding of Chinese script with regard to radicals and the direction of writing

- Ability to write one's own Chinese name in the correct writing direction
- Raise awareness for the Chinese culture in comparison to one's own culture

[updated 24.02.2018]

Module content:

- Introduction to Chinese
- Basic greeting phrases
- Introduction to the pronunciation system of Mandarin Chinese (Hanyu-Pinyin)
- Introduction to the Chinese script system (radicals and writing direction)
- Questions about one's own Chinese name in oral and written form
- Chinese numbers from 1 to 999
- Asking about the date (day, month, year)
- Asking what time it is
- Introducing oneself in Chinese
- Awareness for the Chinese culture (e.g. Chinese festivities)

[updated 05.10.2020]

Teaching methods/Media:

- Presentations by the lecturer
- Partner work
- Group work phases where work assignments will be completed by the students
- Multimedia language lab
- Short presentations by the students
- Internet research

[updated 19.02.2018]

Recommended or required reading:

- Use of free materials developed by the teacher (not textbooks)
- Listening comprehension texts (audio and/or video)
- Internet resources
- Subject-related multimedia programs
- Additional materials on vocabulary and grammar

Workload:

60 class hours (= 45 clock hours) over a 15-week period. The total student study time is 150 hours (equivalent to 5 ECTS credits). There are therefore 105 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules): None.

Recommended as prerequisite for:

Module coordinator: Prof. Dr. Markus Esch

Lecturer: Prof. Dr. Markus Esch

[updated 29.03.2017]

After successfully completing this module, students will be able to name the basic concepts and service models of cloud computing. They will be able to explain the technological foundations of cloud computing and describe modern architectures.

Students will be able to describe advantages and disadvantages, as well as differences to traditional server-based applications, especially in terms of scalability and availability, and will be able to recognize the relationship between architecture and scalability.

Within the framework of a project, students will learn how to work together in small groups and will be able to design and implement scalable cloud-based applications.

[updated 24.02.2018]

Module content:

- 1. Cloud computing architectures, concepts and technologies
 - IaaS, PaaS, SaaS
 - distributed key-value stores
 - distributed file systems
 - distributed hash tables
 - gossiping
 - load balancing
 - consistency
 - error tolerance
 - microservices
- 2. Cloud computing from a developer's perspective
- developing cloud-based applications
- tools and procedures

[updated 24.02.2018]

Teaching methods/Media:

Lecture slides, annotated lecture slides as a script, program examples, project work

Workload:

60 class hours (= 45 clock hours) over a 15-week period. The total student study time is 150 hours (equivalent to 5 ECTS credits). There are therefore 105 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules): None.

Recommended as prerequisite for:

Module coordinator: Thorsten Jakobs, M.Sc.

Lecturer: Thorsten Jakobs, M.Sc.

[updated 08.07.2007]

After completing this module, students will:

- understand the structure of a compiler and its phases;
- understand basic compiler terminology;
- be acquainted with a compiler development strategy (front-end code, back-end code,
- intermediate code, bootstrapping);

- have a detailed appreciation of all phases of a compiler front-end and parts of the back-end including the corresponding theoretical principles.

- The development tools lex and yacc will be used by students during their project work , which will involve developing a compiler front-end for a small high-level programming language.

[updated 08.05.2008]

Module content:

- 1. Introduction to compiling
- 2. Phases of a compiler (with simple illustrative examples), basic terminology
- 3. Bootstrapping
- 4. Lexical analysis
- 5. Syntactic analysis
- 6. Semantic analysis and semantically-driven compilation
- 7. Development tools (generators)
- 8. Code generation
- 9. Project work: Developing a compiler front-end for a high-level programming language (subset of C)

Workload:

30 class hours (= 22.5 clock hours) over a 15-week period. The total student study time is 90 hours (equivalent to 3 ECTS credits). There are therefore 67.5 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules): None.

Recommended as prerequisite for:

Module coordinator: Prof. Dr.-Ing. André Miede

Lecturer: Prof. Dr.-Ing. André Miede

[updated 10.11.2016]

Learning outcomes:

After successfully completing this course, students will be able to describe and explain the foundations of scientific work (literature review, logical arguments). They will be able to apply these skills by preparing a scientific presentation and a written seminar paper.

[updated 19.02.2018]

Module content:

The course teaches the necessary methodological and technical foundations for developing a presentation and seminar paper. This is supported by practical exercises. Together with the professor, the students will select a suitable topic to work on independently during the semester.

- 1. Methodological foundations
- o Working with scientific methods
- o Structuring ideas and arguments
- o Presenting ideas and arguments
- 2. Technical foundations
- o Introduction to LaTeX
- o Bibliography management
- o Using an official template (IEEE)
- 3. Seminar
- o Independent work on individual topic (own idea/suggestions from professor)
- o Presentation of initial results to the group
- o Discussion and exchange with the group
- o Submission of written seminar paper

Lecturer: Prof. Dr. Klaus Berberich

[updated 10.11.2016]

After successfully completing this module, students will be able to independently access, process and reproduce the content of a scientific publication, both orally and in writing. In addition, they will be able to actively participate in a technical discussion.

[updated 26.02.2018]

Module content:

Computer science is increasingly influencing our everyday life. Therefore, it is not surprising that current results from computer science research are also presented to a broader public in the media. This seminar will look at current publications from the field of computer science research (in English) together with the corresponding media coverage (in English or German).

In a lecture, (approx. 30 minutes), each participant will present a selected scientific publication, with special emphasis on how technical details in media reporting are simplified and technical terminology is avoided. In order to facilitate a lively discussion, all participants should be familiar with media coverage, but not with the scientific publication itself. The collected findings will be summarized in a seminar paper (approx. 6 pages).

[updated 10.11.2016]

After successfully completing this module, students will be able to explain and apply image processing algorithms such as noise reduction and deblurring. They will be familiar with the design of digital filters. They will be able to manipulate images without using image editing software.

In addition, they will also be able to apply methods that can detect moving objects in a film, reconstruct 3D information based on images and improve the quality of 2D images. Students will learn how robots _see_.

[updated 19.02.2018]

Module content:

- * Digitization of analog images
- * Image transformations (e.g. linear filters, math. Morphology, diffusion filters, wavelet shrinkage, deblurring)
- * Color perception and color spaces
- * Image editing
- * Feature extraction (edges, corners, lines and circles)
- * Segmentation
- * Extraction of 3D information
- * Object detection

[updated 19.02.2018]

Teaching methods/Media:

100% of the lecture will take place in the PC lab AMSEL "Angewandte Mathematik, Statistik und eLearning". Computer-supported practical case studies will be worked through using the algorithms taught in this module.

In addition, the eLearning system MathCoach (AMSEL PC laboratory 5306) will be used.

PIB-EWM Applied Informatics, Bachelor, ASPO 01.10.2017, semester 5, optional course, informatics specific

Workload:

30 class hours (= 22.5 clock hours) over a 15-week period. The total student study time is 90 hours (equivalent to 3 ECTS credits). There are therefore 67.5 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules): None.

Recommended as prerequisite for:

Module coordinator: Prof. Dr. Helmut Folz

Lecturer: Prof. Dr. Helmut Folz

After successfully completing this course, students will:

_ know the differences between architectural patterns, software design patterns, and programming idioms and be able to explain them.

_ be familiar with the most important architectural patterns and can explain their application context and structure

_ be familiar with the most important software design patterns, their application contexts, structure and dynamics and can illustrate this with examples.

- _ understand the structure and use of JUnit.
- _ have an overview of refactoring methods and can explain them using code examples.

[updated 19.02.2018]

Module content:

- 1. Introduction to software design patterns
 - 1.1 General information
 - 1.2 Pattern categories
 - 1.2 Patterns and software architectures
- 2. Architectural patterns
 - 2.1 Multi-tier patterns
 - 2.2 Broker pattern
 - 2.3 Model-view-controller
 - 2.4 Other architectural patterns
- 3. Software design patterns and applications
 - 3.1 Creational patterns
 - 3.2 Structural patterns
 - 3.3 Behavioral design patterns
- 4. Introduction to JUnit
 - 4.1 Unit tests with JUnit
 - 4.2 The design of JUnit 3.8.x
 - 4.3 Annotations
 - 4.4 JUnit 4.x
- 5. Refactoring and patterns
 - 5.1 Introduction to software metrics
 - 5.2 Introduction to refactoring
 - 5.3 Refactoring and patterns
- 6. Introduction to aspect-oriented software development (optional)
 - 6.1 Aspect-oriented software development overview
 - 6.2 Application examples for aspect-oriented software development
 - 6.3 Aspect-oriented software development and patterns

Workload:

30 class hours (= 22.5 clock hours) over a 15-week period. The total student study time is 90 hours (equivalent to 3 ECTS credits). There are therefore 67.5 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules):

None.

Recommended as prerequisite for:

Module coordinator: Prof. Dr. Martin Buchholz

Lecturer: Prof. Dr. Martin Buchholz

After successful completion of this module, students will be able to classify and describe the basics of studio technology, source coding (audio and video coding) and channel coding (error protection), as well as the necessary transmission technology and its technical implementation. This will enable them to apply the most important methods of video coding (MPEG-4, H. 264) and transmission standards in their fields of application and assess them with regard to efficiency, complexity and their interactions in the subsystems.

[updated 26.02.2018]

Module content:

- 1. Overview and introduction History of television, basics of analog television technology, Transition to digital television
- 2. Recording technology and digitalization of audio and video signals
- 3. Redundancy and irrelevance reduction (source coding) Data reduction, Huffman code, DCT, Video and audio encoding, MPEG-2, MPEG-4, DivX
- 4. Error protection methods (channel coding)
- 5. Digital television signal transmission Transmission via different transmission media: Cable, satellite, terrestrial
- Mobile TV broadcasting and technological convergence Doppler shift, multipath propagation, diversity reception New digital video services, technological convergence, IP datacasting

Lecturer: Prof. Dr. Horst Wieker

After successfully completing this module, students will understand new and adapted vehicle systems and be able to describe different market requirements against the background of market trends. They will be able to characterize the functional structure of the systems and their interfaces and identify solutions to typical problems.

[updated 26.02.2018]

Module content:

This course will focus on trends, technology and system networking in and outside of vehicles.

The electrification of the automobile occupies a strong position in the global market. The transition from the combustion engine to pure electric driving have led to a wide range of new systems and information networks in vehicles.

This course will deal with the following questions:

* What are the main differences between a vehicle with an internal combustion engine and a hybrid or electric car and what effects do these differences have on the function development?

- * How do electronic systems and networks work in an electric car?
- * Are there special functional requirements for assistance systems in electric vehicles?

* What do the data networks look like in the future vehicles and what requirements do they have to meet?

1. General information on market trends and their technical requirements

- * User behavior
- * Political influences
- 2. General technical principles
 - * Gasoline engines
 - * Diesel engines
 - * Hybrid vehicles
 - * Electric vehicles
- 3. The architecture of electric vehicles
 - * Drive systems
 - * Chassis & safety systems
 - * Vehicle cabin systems
 - * High-voltage architectures
- 4. Driver assistance systems
 - * Overview of functionalities and networks
 - * Limits of driver assistance systems
- 5. Communication systems inside and outside vehicles
 - * ITS and electric vehicles
 - * Data networks
- 6. Functional safety
 - * General requirements for security and privacy
 - * Redundancies
 - * Requirements for assistance and security systems
 - * Road vehicles Functional safety ISO 26262

Workload:

60 class hours (= 45 clock hours) over a 15-week period. The total student study time is 120 hours (equivalent to 4 ECTS credits). There are therefore 75 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules): None.

Recommended as prerequisite for:

Module coordinator: Dipl.-Inf. Ulrich Bruch

Lecturer: Dipl.-Inf. Ulrich Bruch

After successfully completing this module, students will be familiar with system design and programming techniques for embedded applications.

They will be able to use and customize bootloaders.

They will have acquired experience in working with real-time operating systems such as FreeRTOS.

Students will be capable of working with embedded Linux e. g. on a single board computer (Raspberry etc.).

They will be able to design simple, embedded systems.

They will have the know-how to use basic IoT technologies (e.g. 6LoWPan, COAP, MQTT,...).

[updated 26.02.2018]

Module content:

- 1. Introduction to the terms used in embedded Linux
- 2. Review course "Embedded Computing", build process, toolchain, cross compiler
- 3. Special mechanisms and techniques for the realization of bootloaders
- 4. Micro operating systems, structure, function, implementation, application problem discussions

5. Embedded Linux using the example of a single-board computer - implementation of simple tasks in user space, meaning and limits of embedded Linux, insight into kernel driver development using the example of a

Push button.

6. Use of embedded systems for the Internet of Things using a small weather station as an example, presentation of common protocols and methods

Topics 2 to 5 will be accompanied by exercises.

Recommended as prerequisite for:

Module coordinator: Prof. Dr. Helmut Folz

Lecturer: Alexander Kiefer, M.Sc.

[updated 19.04.2021]

- Students will be able to implement enterprise applications using the JavaEE 6 framework and run them on the JBoss application server.

- They will have basic knowledge of the JBoss configuration, understand how the application server works, and will be familiar with the main programming features of Java EE using the JBoss 6 AS (EJB 3.0 / 3.1).

- They will be familiar with the integrated development environment Eclipse and the resulting advantages in the field of Java EE / JBoss development.

- They will be capable of developing, testing, debugging and commissioning complex client-server applications.

- They will be familiar with the most important design patterns of software development and their use in Java EE6, the tool _Ant_ for automated building and the _Log4j_ library for logging information into the log files of the application server.

[updated 26.02.2018]

Module content:

1. Introduction The Bean concept, _Hello World_ with EJB and JBoss application server

2. History: Comparison of J2EE 1.1, Java EE 5 and Java EE 6, JBoss development stages

3. JBoss application server: Structure, functionality and basic configuration, reading log files, elementary terms

4. Eclipse IDE: Setting up an environment for the efficient development of Java Enterprise applications, configuring, creating user libraries, debugging a running JBoss application (remote debugging), using ANT as a build tool

5. Enterprise Java Beans (EJB): bean types, interaction of beans, transaction principles (beanmanaged, container-managed), lifecycle of beans

6. Java Persistence API (JPA): Data access layer: EntityManager, object-relational mapping, queries with JPQL, performance enhancement, transactions

7. Java Message Services: Message-Driven Beans

8. Testing: Test-driven development with JUnit

9. Further topics: Web services, EJB Interceptors, EJB Security

Lecturer: Dipl.-Math. Wolfgang Braun

[updated 01.10.2006]

After successfully completing this module, students will have a basic understanding of the importance and problems of error identification and correction. In addition, they will:

- be able to explain basic terms (redundancy, code rate, generator matrix, check matrix, Hamming distance,

Hamming limit, _)

- have mastered arithmetics in finite fields of the type GF (p)

- Coding and decoding of linear binary block codes: have an understanding of the theoretical interrelationships

and have mastered execution by means of matrix calculation

- be able to construct Hamming codes
- be able to classify binary block codes according to their performance capability
- Coding and decoding of cyclic codes via GF (2): have an understanding of the theoretical interrelationships

and have mastered execution by means of polynomial operations

- have knowledge of coding theory applications in various fields
- be able to implement basic algorithms from the lecture in a common programming language
- have gained insights into how the coding theory can be developed further

- have learned how mathematical theories can be translated into practice-relevant algorithms in computer science

[updated 06.09.2018]

Module content:

- Principle of coding a message for error identification and error correction
- Simple error identification and correction procedures (ISBN No., EAN code, repeat code, 2-dimensional
- parity, _.)
- The ring of integers, residue classes
- Computations in finite fields GF (p)
- n-dimensional vector spaces over GF (p)
- Linear block codes over GF (2)
- Hamming codes
- Cyclic codes over GF (2)
- Applications and perspectives (ECC-RAM, CRC-32, CIRC, digital TV,

matrix codes, extension of coding theory by GF (2^n) , convolutional codes, _.)

The lecture will concentrate on the algebraic methods. A statistical treatment of the transmission channel (e.g. _Entropy_, _Markov sources_), as well as an implementation of the algorithms by means of hardware are not part of this lecture.

[updated 19.02.2018]

Recommended prerequisites (modules): None.

Recommended as prerequisite for:

Module coordinator: Prof. Dr. Christine Sick

Lecturer: Prof. Dr. Christine Sick

[updated 10.11.2016]

Learning outcomes:

The courses French I and II are based on each other. In the course of the two modules, students will improve their professional French so that they advance from the desired entry level B1 to level B2 of the Common European Framework of Reference for Languages.

Based on a common level of knowledge and motivation amongst the students, the main objective of the language course is to refresh and develop existing French skills, as well as to reduce barriers to learning and negative attitudes towards language learning while strengthening confidence in one's own foreign language competence. Subjects and situations that are relevant for the later professional career will be used to impart skills and knowledge that will enable students to communicate orally and in writing with colleagues and business partners in francophone countries.

To do so, all four skills (speaking, listening comprehension, reading and writing) will be trained equally using, in part, multimedia learning tools. Content development will be supported by the repetition of a basic vocabulary and the relevant grammatical structures, also in self-study.

The course takes a communicative and pragmatic approach that particularly promotes communicative competence in job-relevant situations through the use of role playing and situational dialogues. This also includes intercultural aspects that raise the students' awareness of cultural differences and enable them to assert themselves in specific situations.

[updated 24.02.2018]

Module content:

Establishing contact

- Greetings
- Introducing oneself and others
- Receiving someone
- Presenting a company

Job profiles and the workplace

- Company-internal communication:
- Describing professional activities and priorities
- Company structure and workflow
- Raising one's own concerns
- Negotiating proposals

Written communication

- Formal aspects (correct form of a letter, layout etc.)
- Formulating a letter of inquiry
- Formulas for greetings and closings, taking into account different stylistic levels

In addition, we will concentrate on basic grammatical structures. Students are expected to work on and expand their basic vocabulary independently in self-learning phases in the multimedia computer language laboratory.

[updated 05.10.2020]

Teaching methods/Media:

Teaching and learning materials (print media, slides, audio-visual teaching materials), multimedia learning software specially compiled for the learning group.

[updated 19.02.2018]

To do so, all four skills (speaking, listening comprehension, reading and writing) will be trained equally using, in part, multimedia learning tools.

Content development will be supported by the repetition of a basic vocabulary and the relevant grammatical structures, also in self-study.

The course takes a communicative and pragmatic approach that particularly promotes communicative competence in job-relevant situations through the use of role playing and situational dialogues.

This also includes intercultural aspects that raise the students' awareness of cultural differences and enable them to assert themselves in specific situations.

Talking on the telephone

[updated 05.10.2020]

Module content:

- Common verbal expressions
- Giving information
- Asking for information
- Arranging and postponing appointments

Job market and job search

- Job advertisements
- Applicant's profile
- Hiring personnel

Application process

- Resume
- Application cover letter
- Job interview
- Working conditions

In addition, we will concentrate on basic grammatical structures. Students are expected to work on and expand their basic vocabulary independently in self-learning phases in the multimedia computer language laboratory.

[updated 05.10.2020]

Teaching methods/Media:

Teaching and learning materials (print media, slides, audio-visual teaching materials), multimedia learning software compiled specifically for the learning group.

[updated 19.02.2018]

Recommended or required reading:

PONS Kompaktwörterbuch für alle Fälle - Französisch-Deutsch/Deutsch-Französisch.
Vollständige Neubearbeitung 2002, Klett-Verlag, Stuttgart, 3-12-517209-8
M. Grégoire, O. Thiévenaz: Grammaire Progressive du Français - Niveau intermédiaire. (Deutsche Ausgabe); Klett-Verlag, Stuttgart, ISBN 3-12-529873-3

Students will receive a list of recommended teaching and learning materials.

We recommend the following multimedia learning program for independent learning: Oberstufe Französisch. 6000 Vokabeln zu allen Themen. Vokabellernprogramm auf CD-ROM mit Sprachausgabe. Klett-Verlag, Stuttgart

Workload:

30 class hours (= 22.5 clock hours) over a 15-week period. The total student study time is 60 hours (equivalent to 2 ECTS credits). There are therefore 37.5 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules): None.

Recommended as prerequisite for:

Module coordinator: Prof. Dr. Christine Sick Lecturer: Prof. Dr. Christine Sick

[updated 10.11.2016]

Learning outcomes:

The course French for Beginners I is aimed towards learners with little or no previous knowledge of the French language. The courses French for Beginners I and II are based on each other. In the course of the two modules, students will first reach proficiency level A1 and then advance to level A2 of the European Framework of Reference for Languages.

The goal of the course is to provide students with basic knowledge of the French language, which will enable them to communicate in general and professional situations as quickly as possible, both orally and in writing. To do so, all four skills (speaking, listening comprehension, reading and writing) will be trained equally. Content development will be supported by the repetition of the relevant grammatical structures.

The course takes a communicative and pragmatic approach that particularly promotes communicative competence in job-relevant situations through the use of role playing and situational dialogues. This also includes intercultural aspects that raise the students' awareness of cultural differences and enable them to assert themselves in specific situations.

[updated 26.02.2018]

Module content:

- Establishing contact
- Greetings
- Introducing oneself and others
- Asking how someone is feeling
- Giving information about yourself and requesting information about others
- Saying thank you, apologizing and saying goodbye

Job profiles and the workplace

- Company structure and workflow
- Describing jobs and activities
- Showing and describing products

Telephone communication

- Common verbal expressions
- Asking for and giving information

In addition, we will concentrate on basic grammatical structures. Students should work on and expand their basic vocabulary independently.

[updated 26.02.2018]

Recommended or required reading:

The course is based on the following textbook and will be supplemented by suitable material from other textbooks:

Jambon, Krystelle: Voyages 1 - Französisch für Erwachsene, Klett, Stuttgart: 2006.

We also recommend purchasing the following grammar exercise book: Eurocentres Paris (group of authors): Exercices de grammaire en contexte - niveau débutant, Hachette Livre, Paris: 2000, 144 p.

Students will receive a list of recommended teaching and learning materials. We recommend the following multimedia learning program for independent learning: Oberstufe Französisch. 6000 Vokabeln zu allen Themen. Vokabellernprogramm auf CD-ROM mit Sprachausgabe. Klett-Verlag, Stuttgart

Module coordinator: Prof. Dr. Damian Weber

Lecturer: Prof. Joberto Martins

[updated 02.10.2019]

After successfully completing this course, students will be able to classify all of the consequences of adopting Software Defined Networking (SDN) to the applications development process. Students will be able to assess the impact of SDN for the TCP/IP architecture. They will also be capable of explaining and implementing openflow-based applications. In addition, students will be capable of designing control and monitoring frameworks and writing a concept for a deploying mechanism of such tools using advanced concepts such as federation.

[updated 26.02.2018]

Module content:

- 1. Networking Architectural Approaches and Issues:
- Actual IP architecture scenario and new requirements
- Software Defined Networking (SDN)
- Architectural issues: naming, addressing, mobility, scalability, autonomy and virtualization
- 2. OpenFlow Protocol:
- OpenFlow (OF) architecture
- OF protocol
- OF and virtualization
- OF use cases: virtual router, level 2 virtualization, other
- OF experimentation with MiniNet (hands-on exercises)

3. Experimental Networks (EN):

- Experimental Networks principles - user-defined, large and innovative experiments, users, reproducibility, scaling and monitoring:

- . Experiment (project) requirements
- . Experiment (project) planning
- . Experiment (project) execution
- . Experiment (project) monitoring
- CMF Control and Monitoring Framework model and components
- Experimental network OFELIA (OpenFlow in Europe: Linking Infrastructure and Applications) _ Architecture:
- components, tools, experimentation facilities, monitoring
- Experimental Network OMF (Orbit Management Framework) _ Architecture:
- components, tools, experimentation facilities, monitoring

- Experimental Network FIBRE EU-BR (Future Internet Testbed Experimentation between Brazil and Europe) _ Architecture:

- components, tools, experimentation facilities, monitoring
- Experimental networks monitoring:
- Architecture, components and issues on monitoring an experiment using an "Experimental Network" (EN)

- Study case: FIBRE EU-BR I&M Architecture

- Experimental Networks Federation:
- . Federation principles
- . SFA (Slice-based Federation Architecture) approach
- Experimental Networks "hands-on" exercise:

Exercise: create a project/experiment on one of the above experimental networks (OFELIA, OMF or FIBRE)

- 4. Future Internet Trends and Scenarios:
- QoS (Quality of Service) and QoE (Quality of Experience) in FI
- FI use cases
- FI research

Workload: 60 class hours (= 45 clock hours) over a 15-week period. The total student study time is 150 hours (equivalent to 5 ECTS credits). There are therefore 105 hours available for class preparation and follow-up work and exam prepar	ation.
Recommended prerequisites (modules):	

None.

Recommended as prerequisite for:

Module coordinator: Hong-Phuc Bui, M.Sc.

Lecturer: Hong-Phuc Bui, M.Sc.

After successfully completing this module, students will have mastered the three components of the Qt framework: Qt widget, QML/QtQuick and the input/output framework. They will be able to use these components to develop desktop applications with a graphical user interface and access to common data sources (file system, database, http web service).

In addition, they will demonstrate and deepen the knowledge they have acquired in this subject area in a project.

[updated 26.02.2018]

Module content:

1. Qt Widget and QML/QtQuick

- * Common C++-based GUI widgets
- * Designing graphical user interfaces with the declarative language QML
- 2. The signal and slot concept, the elementary concept in Qt
- to connect Qt objects
- 3. In and output utilities in Qt libraries
 - * Access to the file system, database and http website
 - * Graphical representation of data
- 4. Working with the IDE Qt Creator and the build program qmake, syntax of a qmake file.

[updated 26.02.2018]

Recommended or required reading:

60 class hours (= 45 clock hours) over a 15-week period. The total student study time is 150 hours (equivalent to 5 ECTS credits). There are therefore 105 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules):

None.

Recommended as prerequisite for:

Module coordinator:

Prof. Steven Frysinger

Lecturer: Prof. Steven Frysinger

After successfully completing this module, students will be able to:

- Discuss the cognitive characteristics of humans involved in computing and information systems;
- Analyze information systems to assess their ability to meet user needs;
- Identify and characterize the users of a particular information system to be designed;
- Gather and analyze needs assessment data from representative users of an information system;
- Develop a hierarchical task analysis of the users;
- Develop both a conceptual design and a physical design for an information system;
- Write a user requirements specification for the system;

- Develop a test plan by which their system design could be submitted to summative evaluation upon implementation.

Computer systems are embedded in virtually every aspect of our modern life, from the database systems that help us run our businesses to the cellular telephones we have come to depend on for daily personal communication. However, developers of these tools frequently forget that the human being is part of the computer system, because essentially all of these systems depend on human interaction of some sort to produce the desired end result. In order to overcome this, we must educate computer system developers about the nature of the human/computer interface (HCI) and give them tools with which to design and test effective interfaces in the systems they develop.

This course will:

(A) make the system developer aware of the human aspects of the system, including the cognitive and perceptual attributes of the human being;

(B) provide the developer with design criteria and guidelines that will help produce effective interactive computer systems; and

(C) teach the developer how to quantitatively test the human/computer interface in a rigorous way

[updated 26.02.2018]

Module content:

- 1. Interactive Computer Systems, Human Factors Engineering, and the Software Engineering Lifecycle
- 2. Process of Interaction Design: User-centered Design
- 3. Needs Assessment and Requirements Specification
- 4. Conceptual Design
- 5. Physical Design: Graphical User Interfaces
- 6. Widget Design: When to use what
- 7. Test Phase: Evaluation
- 8. Understanding Users: Cognition, Sensation & Perception, Mental Models, and the "Differently-Abled"
- 9. Decision Support
- 10. Data Representation
- 11. Help and Documentation; Multimedia and the World Wide Web

[updated 26.02.2018]

After successfully completing this course, students will be able to use the system properties of an IT system to secure evidence that can be used in court after an IT security incident. To this end, they will apply best practices, compare the advantages and disadvantages, isolate problems that arise and investigate the usability of the secured data. They will be capable of interpreting the collected data and presenting the results convincingly to an independent authority.

[updated 26.02.2018]

Module content:

- 1. General information about the field Tools Literature
- 2. Introduction Definition of terms Motivation for authorities Motivation for companies
- Principles of IT forensics Procedure model Digital traces Volatile data Interpreting data Interpreting time stamps
- File system basics Hard disks, partitioning, file systems Unix file management
- 5. File system analysis Creating a file system image Analyzing a file system image Deleted files File carving
- 6. Analyzing a compromised system Process handling RAM Rootkits

[updated 10.11.2016]

Learning outcomes:

After successfully completing this course, students will be able to secure justiciable evidence in the event of an IT security incident. In particular, they will be capable of tracing manipulative operations at the operating system level. This will enable them to uncover digital traces of electronic transactions or data transfers, even if they were rendered unusable for purposes of deception.

Module content:

- 1. General information about the field Tools Literature
- 2. Introduction Definition of terms Motivation for authorities Motivation for companies
- 3. Principles of IT forensics Procedure model Digital traces Volatile data Interpreting data Interpreting time stamps
- File system basics Hard disks, partitioning, file systems Unix file management
- 5. File system analysis Creating a file system image Analyzing a file system image Deleted files File carving
- 6. Analyzing a compromised system Process handling Rootkits

Lecturer: Prof. Dr. Damian Weber

[updated 14.06.2019]

After successfully completing this project, students are able to deal with security-related issues by means of a practical project.

They will be able to identify and analyze security problems and, based on this, explain classic methods of attack.

In addition, they will be able to combine attack techniques and describe how systems can be hardened against them.

[updated 05.03.2020]

Module content:

A selection of project tasks will be presented. The tasks are worked on independently by the students in small groups. Regular meetings are held to report on the progress of the project. The results are summarized in a document and presented in a talk.

[updated 14.02.2020]

Recommended or required reading: Relevant online references to security issues, journal articles etc.

[updated 10.11.2016]

After successfully completing this module, students will be able to:

- Define environmental science and describe the key environmental challenges presented by industrial society;

- Define industrial ecology and explain the metaphorical relationship between industrial systems and biological ecosystems;

- Interpret the _master equation_ of industrial ecology and explain the role of technology in the pursuit of a more sustainable industrial society;

- Define and give examples of the concepts of Design for Environment and Environmentally Conscious Manufacturing;

- Provide a detailed explanation of the Life Cycle Assessment methodology and carry out such an assessment on a product/system;

- Discuss allocation of environmental loads to system components;

- Interpret the role of Life Cycle Assessment in environmental management decision-making.

[updated 26.02.2018]

Module content:

We will study the theoretical underpinnings of IE, briefly examining the biological metaphor for industrial ecosystems. We will also address various elements of practice which are associated with IE, especially Life Cycle Assessment and Design for Environment. Our goal is to better understand how industrial ecology can help us to evolve into a sustainable industrial society.

[updated 10.11.2016]

After successfully completing this course, students will have learned basic information retrieval methods. This

includes retrieval models (e.g., Vector Space Model), link analysis (e.g., PageRank), and effectiveness measures (e.g., Precision/Recall and MAP). They will be able to apply/implement the above methods in practice. In addition, students will be aware of easily accessible information retrieval systems (e.g., Apache Lucene/Solr).

Module content:

Information Retrieval is pervasive and its applications range from finding contacts or e-mails on your smartphone to web-search engines that index billions of web pages. This course covers the most important information retrieval methods. We will look into how these methods are defined formally, including the mathematics behind them, but also see how they can be implemented efficiently in practice. As part of the project work, we will implement a small search engine from scratch.

- 1. Introduction
- History
- Applications
- Course overview
- 2. Natural language
- Documents and terms
- Stopwords and stemming/lemmatization
- Synonyms, polysemes, compounds
- 3. Retrieval models
- Boolean retrieval
- Vector space model with TF.IDF term weighting
- Language models
- 4. Indexing methods
- Inverted index
- Compression (d-Gaps, variable-byte encoding)
- Index pruning
- 5. Query processing
- Holistic methods (DAAT, TAAT)
- Top-k methods (NRA, WAND)
- 6. Evaluation
- Cranfield Paradigm
- Benchmark initiatives (TREC, CLEF, NTCIR)
- Traditional effectiveness measures (precision, recall, MAP)
- Non-traditional effectiveness measures (nDCG, ERR)
- 7. Web retrieval
- Crawling
- Near-duplicate detection
- Link analysis (PageRank, HITS)
- Web spam
- 8. Information retrieval systems
- Indri
- Apache Lucene/Solr
- ElasticSearch

[updated 11.11.2016]

The main objective of this course is the development of consciousness and reflection on one's own cultural imprint in thought, action and communication patterns. This awareness is decisive for any successful intercultural cooperation in both professional and private spheres.

We approach other cultures through an idea of culture that influences our perception, thinking and actions. The characteristics and comparable dimensions of cultures on the macro level are in the foreground here. These, in turn, are complemented by a look at the intercultural micro-level that arises in the contact between individuals.

An introduction to the theories and approaches from different disciplines to these questions will enable a better understanding of people from other cultures and is intended to facilitate a change of perspective. This change of perspective is a central starting point for acquiring the following key competences:

- The ability to assess your own personal cultural influence,
- The ability to know, understand and accept backgrounds of foreign/culturally specific behavior,
- The ability to deal with contradiction and ambiguity,
- The ability to behave adequately in an intercultural context and thus, enable effective action.

[updated 19.02.2018]

Module content:

- 1. What is culture? How do cultural differences arise? Stereotypes?
- 2. Communication and culture _ How does communication work and what role can cultural factors play in it?
- 3. Verbal and non-verbal communication
- 4. Acculturation/Culture shock
- 5. Intercultural communication strategies
- 6. Diversity management
- 7. Globalization and its influences on culture and intercultural communication

Case studies and examples will be adapted to the needs of the students.

[updated 19.02.2018]

Teaching methods/Media:

Lectures by lecturers and discussion, group work on small case studies, simulation games, films.

After successfully completing this course, students will:

- be able to manage, modularize and document a project with Maven.
- understand the Java configuration of Spring.
- be able to use SpringBoot for their own web applications.
- be able to write a Java application with JSPs.
- understand the life cycle of JSF and can apply it to their own programs.
- be capable of developing and running a JSF-based application.

[updated 19.02.2018]

Module content:

The lecture offers an introduction to modern Java technologies for the development of dynamic websites. Stand-alone programs are developed on a SpringBoot basis with an integrated web server. However, all technologies also work on a common server such as GlassFish. The main focus of the lecture is on JavaServer Faces.

1. Basic terms from the field of web development

- 2. Maven
- 2.1. Principles of Maven
- 2.2. Modularization with Maven
- 2.3. Profiles
- 2.4. Documentation with Maven

3. Spring and SpringBoot

- 3.1. Introduction to Spring and SpringBoot
- 3.2. Java configuration of Spring
- 3.3. Advanced Springboot configuration
- 4. JavaServer Pages (JSP)
- 4.1. Short introduction to servlets
- 4.2. JSP

5. JavaServer Faces

- 5.1. The concept of JavaServer Faces and the lifecycle of JSF pages
- 5.2. Portlets with JavaServer Faces
- 5.3. ManagedBeans as an interface between Java and websites
- 5.4. Event handling in JSF
- 5.5. Validation with JSF
- 5.6. JSF Ajax library
- 5.7. Introduction to PrimeFaces
- 5.8. The JSF template mechanism
- 5.9. Developing your own components
- 5.10. Running JSF applications with SpringBoot
- 5.11. Running JSF applications with a GlassFish server

[updated 10.02.2017]

After successfully completing this course, students will:

- be able to set up, configure and operate a Liferay portal server.
- be able to develop their own portlets that correspond to the standard.
- be able to develop their own portlets with the Liferay API.
- be able to use Apache Tiles as a templating mechanism.
- be able to use other Spring projects in their web application.
- be able to develop their own applications in Vaadin.

[updated 24.02.2018]

Module content:

This lecture is based on "Internet Development with Java 1" and teaches further concepts in web page development with the programming language Java. One of the topics is for example, the construction and operation of a Java portal based on the OpenSource container Liferay using the SystemTechnikPortal that runs in the SystemTechnikLab. First, the concepts of the portlet standard (JSR 286) and the development of portlets with the standard will be discussed. Then, we will learn about Liferay 's proprietary API that makes development much easier. In addition, Vaadin will be introduced as an alternative View technology to JSP/JSF.

- 1. Portlet concepts and basics
- 1.1. Introduction: basics and concepts of portlet technology
- 1.2. Liferay as a portlet container
- 1.3. Portlet 2.0 (JSR 286)
- 1.4. JavaServer Pages (JSP) as a standard presentation technology
- 1.5. Basic administration of a portal server
- 2. Liferay API
- 2.1. Developing with the Plugins SDK
- 2.2. Service Builder
- 2.3. Liferay portlet MVC
- 2.4. Managing users and permissions
- 2.5. Hooks

3. Apache Tiles as a templating mechanism

- 4. Spring in web applications
- 4.1. Spring MVC
- 4.2. Spring Webflow
- 4.3. Spring Data JPA
- 4.4. Spring Security
- 5. Vaadin GUI framework
- 5.1. How Vaadin works
- 5.2. Vaadin and JSF: a comparison
- 5.3. Portlets with Vaadin

After successfully completing this module, students will be familiar with the legal issues that are of significance when creating, maintaining and hosting a website.

They will be able to answer questions pertaining to general topics such as the application of law to the internet, copyright infringement and intellectual property rights, as well as to more advanced topics such as e-commerce, distance selling, concluding contracts via the internet, internet security and data protection and privacy. They will be capable of demonstrating what they have learned using examples and relevant legal judgments.

Students will be able to assess the applicability of the relevant regulations and laws in this area and use this knowledge to clarify new issues.

[updated 26.02.2018]

Module content:

- 1. The website
- 1.1 Domain name law
 - a) Address allocation
 - b) Requirements relating to potential infringements of trademark law
- 1.2 Impressum (site information required under German law)
 - a) Mandatory information
 - b) Requirements under German employment law
- 2. Concluding contracts via the Internet
- 2.1 Formal requirements
- 2.2 Offer and acceptance
- 2.3 General terms and conditions
- 2.4 Appeals
- 3. Patent and proprietary rights
- 3.1 Application of law
- 3.2 Copyright laws
- 3.3 Trademark law
- 4. Security
- 4.1 Electronic signatures
- 4.2 Watermarks

[updated 10.11.2016]

Learning outcomes:

After successfully completing this module, students will be able to orient themselves on the night sky, recognize structures and find the most important constellations in the northern sky. In addition, they will be capable of using the most important basic tools for astronomical observations. Students will also be familiar with elementary celestial mechanics and will be able to make simple predictions for the rising and setting of selected celestial bodies. Finally, students will know about the various astronomical objects in the sky and will be familiar with the standard models for both the formation of the universe (Big Bang theory) and its further development (accelerated expansion of the universe).

Workload:

30 class hours (= 22.5 clock hours) over a 15-week period. The total student study time is 90 hours (equivalent to 3 ECTS credits). There are therefore 67.5 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules): None.

Recommended as prerequisite for:

Module coordinator: Dipl.-Inform. Marion Bohr

Lecturer: Dipl.-Inform. Marion Bohr

[updated 10.11.2016]

CUDA (Compute Unified Device Architecture) is a technology developed by NVIDIA that allows software developers and software engineers to use a CUDA-enabled graphics processing unit for general purpose processing.

After successfully completing this module, students will have received insight into problem solving by means of parallel programming. They will understand the algorithmic basics of parallel programming. Students will be capable of using hardware and software components based on CUDA and demonstrate their use by carrying out clearly defined practical exercises. They will be able to leverage the strengths of a GPU architecture in practice-oriented project work, optimize its performance and analyze the resource requirements of a parallel implementation.

[updated 26.02.2018]

Module content:

- * Basics: processes, threads, blocks, warps, memory types, etc.
- * Algorithmic basics
- * Examples of algorithms and implementations for programs that can and cannot be parallelized
- * Runtime measurement, runtime comparison, possibilities for increasing performance
- * GPU applications from different subject areas using the example of CUDA

[updated 26.02.2018]

Teaching methods/Media: Presentation slides, board, exercises

Workload:

60 class hours (= 45 clock hours) over a 15-week period. The total student study time is 150 hours (equivalent to 5 ECTS credits). There are therefore 105 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules):

None.

Recommended as prerequisite for:

Module coordinator: Prof. Dr. Peter Birkner

Lecturer: Prof. Dr. Peter Birkner

[updated 27.08.2020]

Learning outcomes:

After successfully completing this module, students will be familiar with the basics and concepts of single-board computers:

- They will understand the differences between a computer and a microcontroller.

- They will be familiar with the most important application areas of such miniature computers.

- Students will be more familiar with the software and hardware.
- They will be able to perform simple measurement and control tasks with a single-board computer.

- They will understand the concept of a cluster and learn the basics of MPI based on the example of a Raspberry Pi Zero cluster.

[updated 23.11.2020]

Module content:

- Introduction (Why use single-board computers at all? History and development, differences between Raspberry Pi and Arduino, important applications)
- Hardware (Models, processors, connectors, compute modules, general purpose input output, sensors, firmware)
- Software (Operating systems, brief introduction to UNIX, Wolfram Mathematica, Raspi as web server)
- Network (Raspi as VPN gateway, SSH, Samba client)
- IoT (Raspi as Z-Wave controller with FHEM)
- Programmierung (Assembler, scripting languages, Python, C)
- The GPIO interface (experiments with the OnBoard LED, temperature sensors, HATs)

- The I2C bus

- A Raspberry Pi cluster consisting of 4 Raspberry Pi Zeroes (overview, installation and configuration)
- Introduction to parallel programming with MPI (Message Passing Interface) and the Raspberry Pi cluster

Other possible topics:

- Emulating a Raspberry Pi
- Single-board computers from other manufacturers

[updated 01.04.2003]

After successfully completing this module, students will have a basic understanding of the

- terms and relationships required for the use of WLAN in communications technology.
- They will be able to explain the basic concepts of WLAN technologies according to the standard 802.11
- They will be able to use the formulas from telecommunications engineering discussed in the lecture to solve problems

in the field of WLAN.

- Students will know how to set up secure WLAN environments
- They will be able to explain basic procedures for planning, installing, configuring (functionality, security) and monitoring WLAN systems
- And they will be able to design simple WLAN applications

[updated 19.02.2018]

Module content:

- Basic functionality according to the IEEE 802.11 standard
- Typical areas of application and reasons for use
- Basic knowledge about electromagnetic waves (modulation, attenuation, antenna gain, free space path loss,...)
- Practical exercises on the propagation of electromagnetic waves
- Problems with use and negative aspects
- The technologies of the WLAN standard $802.11\,$
- Presentation of a current system with practical experiments
- Security in WLANs
- Planning and monitoring WLANs with a presentation of the software used for this purpose
- Examples of use
- Evaluation criteria for WLAN systems

[updated 19.02.2018]

Teaching methods/Media:

Lecture using PowerPoint slides and worksheets. Practical experiments with standard WLAN hardware and home-made antennas.

[updated 19.02.2018]

[updated 10.11.2016]

The course provides students with the important legal knowledge necessary for founding and operating a company.

After successfully completing this module, they will be able to select the right form of company for setting up a business and examine the corresponding possibilities for funding.

Students will be able to answer typical questions about setting up a company: Which contracts does a young entrepreneur have to conclude to cover his own needs? What is important when concluding a contract with a customer? Which liability issues and protection options are relevant?

Students will be able to model the path from the initial idea to operation and use practical examples to assess the legal possibilities and dangers.

[updated 26.02.2018]

Module content:

- 1. Introduction Idea, business plan
- 2. Paths to starting your own company: forming a new company, participation, takeover
- 3. Funding, grants
- 4. Contract law, drafting a contract
- 5. Advertising, unfair competition
- 6. Liability, insurance

[updated 10.02.2017]

After successfully completing this module, students will know about fundamental supervised and unsupervised methods from machine learning. This includes methods for regression, classification, and clustering. Students will understand how these methods work and know how to use existing implementations (e.g., in libraries such as scikit-learn). Given a practical problem setting, they will be able to choose a suitable method, apply it to the dataset at hand, and assess the quality of the determined model. In addition, students will be aware of typical data-quality issues and know how to resolve them.

[updated 26.02.2018]

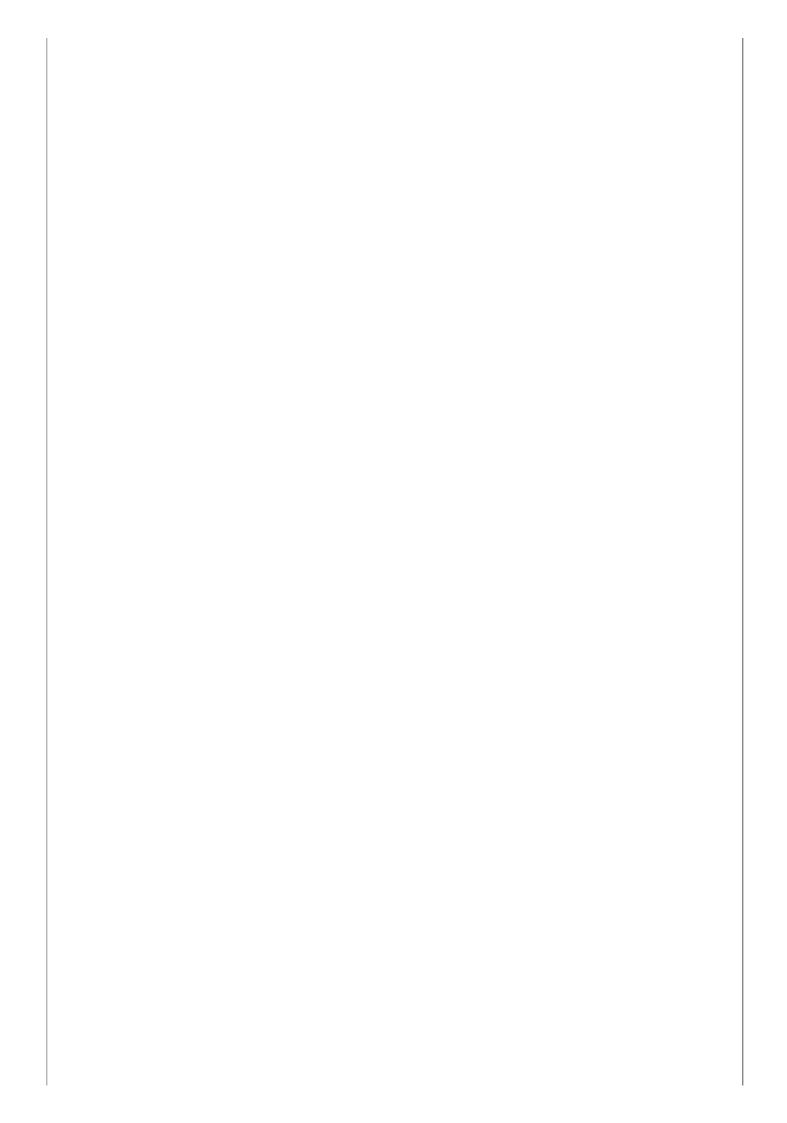

Module content:

Machine learning plays an increasingly important role with applications ranging from recognizing handwritten digits, via filtering out unwanted span e-mails, to the ranking of results in modern search engines. After successfully completing this module, students will know about fundamental supervised and unsupervised methods of machine learning. We will look into how these methods are defined formally, including the mathematics behind them. Moreover, we will apply all methods on concrete datasets to solve practical problems. To do so, we will rely on existing libraries (e.g., scikit-learn) that provide efficient implementations of the methods. This course will be accompanied by theoretical exercises and project assignments. The exercises will help students to deepen their understanding of the methods, while the project assignments will encourage students to solve practical problems by applying their knowledge to real-world datasets.

1. Introduction

- What is Machine Learning?
- Applications
- Libraries
- Literature
- 2. Working with data
- Typical data formats (e.g., CSV, spreadsheets, databases)
- Data quality issues (e.g., outliers, duplicates)
- Scales of measures (i.e., nominal, ordinal, numerical)
- Data pre-processing (in Python and using UNIX command line tools)
- 3. Regression
- Ordinary least squares
- Multiple linear regression
- Non-linear regression
- Evaluation
- 4. Classification
- Logistic regression
- k-nearest neighbors
- Naive Bayes
- Decision trees
- Neural networks
- Evaluation
- 5. Clustering
- k-means and k-medoids
- Hierarchical agglomerative/divisive clustering
- Evaluation
- 6. Outlook
- Ongoing research
- Competitions (e.g., Kaggle and KDD Cup)
- Other resources (e.g., KDnuggets)

[updated 10.11.2016]

After successfully completing this module, students will be familiar with typical mathematical software, know its advantages and disadvantages, can classify it according to type and application areas and can develop solution algorithms for simpler problems and implement them in a suitable language. They will be able to differentiate between computer algebra systems, numerical systems, statistical software, graphical systems and logical programming languages. They will be familiar with the problems of rounding errors and error propagation and know how to control such errors.

Furthermore, they will be able to manipulate and analyze mathematical terms with the typical data and control structures of computer algebraic systems (CAS) and implement algorithms for symbolic term transformations.

[updated 19.02.2018]

Module content:

- 1. Problems of rounding errors, error propagation
- 2. Classification of common math software systems
- 2.1. Numerical packages

(classification, computation accuracy, rounding problems,

- error propagation, typical examples)
- 2.2. Computer algebraic systems

(classification, exact computations, symbolic computation, runtime problems, typical examples)

2.3. Other software

(graphical CAS, statistics packages, software for TR, typical examples)

2.4. Declarative languages

(description of the problem and not the solution algorithm, typical examples)

3. CAS

- 3.1. General elementary concepts of computer algebra
- 3.2. Recursive structure of mathematical expressions
- 3.3. Elementary mathematical algorithms, case study
- 3.4. Recursive mathematical algorithms, case study
- 3.5. Polynomials, exponential and trigonometric transformations, case study
- 4. Solving problems with mathematics software

4.1 SPSS

4.1.1 Introduction to SPSS

4.1.2 Case studies: Data mining methods Cluster analysis and exploratory data analysis with SPSS 4.2 MAPLE

4.2.1. Introduction, data structures, control structures, MAPLE programming environment

4.2.2 Case studies: Sorting and search methods,

solving equation systems,

route planning, graph theory and coding

4.3 MatLab

- 4.3.1. Introduction, data structures, control structures, MatLab development environment
- 4.3.2 Case studies: Numerical methods for interpolation and approximation
- 5. Introduction to PROLOG
- 5.1. Structure: clauses, facts and rules
- 5.2. The backtracking algorithm
- 5.3. Lists and recursion in PROLOG
- 5.4. Creating your own CAS in PROLOG

Teaching methods/Media:

100% of the lecture will take place in the PC lab "Angewandte Mathematik, Statistik und eLearning". All of the practical exercises for the lecture, as well as solving exercises, homework and case studies will be done with the e-learning system MathCoach, CAS systems, statistics and mathematics software (AMSEL lab: PC lab: "Angewandte Mathematik, Statistik und eLearning").

[updated 10.11.2016]

After successfully completing this course, students will be able to carry out measurements in the laboratory using equipment (e. g. oscilloscope, function generators, transmitter, spectrum analyzer, etc.), evaluate, interpret and then present their measurement results.

Students will be familiar with the relevant simulation tools used in communications engineering and digital technology. They will be able to simulate a given circuit and subject the simulation results to a critical comparison with real measured values. They will also be able to explain the measured and simulated phenomena with regard to the circuit technology used.

Students will be capable of working independently on more complex simulation and measurement tasks. In addition, they will acquire basic knowledge in semiconductor technology in order to be able to use the right circuitry techniques for various applications.

[updated 19.02.2018]

Module content:

1. Basics

1.1 Basics of telecommunications electronics and semiconductor technology1.2 Introduction to and practice in working with the simulation tools ORCAD PSPICE and Matlab/Simulink

2. Simulation and measurement of analog modulation methods

2.1 Measurements on test setups in the telecommunication electronics lab

2.1 Simulation of analog modulation methods with ORCAD PSPICE and Matlab/Simulink

- 3. Simulation of digital modulation methods
- 3.1 Simulation of a digital transmission chain with Matlab
- 3.2 Analysis of bit error rates subject to SNR (via simulation in comparison with theory)
- 4. Aspects of communications engineering in audio transmission
- 4.1 Basics A/D and D/A conversion
- 4.2 Simulation of the different A/D and D/A converter concepts using ORCAD PSPICE

5. RFID technology and demonstration

5.1 Programming of the Arduino Uno board / RFID RC522 module

6. Simulation of circuits from digital technology

- 6.1 Structure of different counters (e. g. Gray code)
- 6.2 Pseudorandom number generators
- 6.3 Analysis of the properties of M-sequences (autocorrelation, cross correlation)

6.4 Use of pseudorandom number generators in mobile communication

[updated 19.02.2018]

Teaching methods/Media:

Measurements and simulations in the telecommunication electronics lab Equipment used: Oscilloscope, function generators, measuring transmitters, AM/FM modulators, spectrum analyzers, CMOS/TTL gates, transmission gate, PLL Simulators used: ORCAD PSPICE, Matlab/Simulink, digital technology simulators The following should be used for presentations during the final demonstration: MS PowerPoint, white board, flipchart

[updated 10.11.2016]

After successfully completing this module, the students will have acquired the following competences:

- They will know, understand and be able to explain the structure of mentoring programs
- They will know and understand theories of conversation techniques and be able to apply them during consultations
- They will be able to plan and conduct consultations and group discussions
- They will be able to reflect upon and optimize their consulting competences
- They will be able to build new networks

(Text form: In addition to teaching the history, structure and background of mentoring programs in general, this course is intended help students become familiar with the university's internal mentoring program.

Students will get to know different theories of conversation and practice using them. By means of different methods, students will learn to reflect upon and optimize their own consulting skills. For the duration of one semester, students will support a group of 6-10 other students via group work and individual counselling.

Through regular inter-faculty meetings, students will establish new networks.

[updated 19.02.2018]

Module content:

- Definition, history and background of mentoring programs in the USA and Europe
- Structure and course of the HTW mentoring program
- Theories in conversation management
- Theories about group dynamics
- Non-verbal communication
- Schulz von Thun communication model
- Constructive criticism
- Giving feedback
- Active listening
- Assuming roles
- Planning, structuring and recording consultations and group discussions

KI578 Computer Science and Communication Systems, Bachelor, ASPO 01.10.2014, optional course, technical KIB-KISB Computer Science and Communication Systems, Bachelor, ASPO 01.10.2017, optional course, technical

PIBWI22 Applied Informatics, Bachelor, ASPO 01.10.2011, optional course, informatics specific PIB-KISB Applied Informatics, Bachelor, ASPO 01.10.2017, semester 6, optional course, informatics specific

Workload:

60 class hours (= 45 clock hours) over a 15-week period. The total student study time is 150 hours (equivalent to 5 ECTS credits). There are therefore 105 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules): None.

Recommended as prerequisite for:

Module coordinator: Prof. Dr.-Ing. Ahmad Osman

Lecturer: Prof. Dr.-Ing. Ahmad Osman

[updated 20.01.2017]

Students will learn the practical and scientific methods of project work by writing a paper based on examples, problems and applications from the field of signal and image processing with AI, e. g. research on the state of knowledge and technology in image processing, classification methods, regression procedures, data compression, data reconstruction, human-machine interaction, literature research (also in English), presentation of project results.

After successfully completing this module, students will be able to document and explain their approach. They will be able to defend and explain their results achieved using the engineering knowledge they have acquired. This will enable them to illustrate the use of the above methods within project work.

[updated 24.02.2018]

Module content:

Image processing: filtering techniques

Image segmentation: region-based or contour-based methods

Classification methods: neural networks, support vector machine etc.

Data fusion: Evidence Theory

Data reconstruction

Data visualization

Data compression

Human-machine interaction

Research to deepen technical or scientific aspects in the form of a supervised short paper. Literature research (incl. English specialist literature).

Scientific presentations.

[updated 24.02.2018]

Teaching methods/Media:

Short paper with academic supervision on a clearly defined research topic using scientific project work methods. Participants will be familiar with the state of research/technology in selected areas of artificial intelligence and will be capable of dealing with research and development projects.

Module coordinator: Christoph Karls, M.Sc.

Lecturer: Christoph Karls, M.Sc.

[updated 10.11.2016]

After successfully completing this module, students will be able to explain the basics of application development in the context of mobile applications and work with a corresponding development environment (e. g. Android Studio).

They will be familiar with the basic concepts of the Android operating system (e. g. activities, intents, services and threads) and can plan and implement applications independently.

Students will put the above mentioned topics to the test in exercises. This will enable them to develop an integrated solution for a given task in a final project independently and in a problem-oriented manner.

[updated 19.02.2018]

[updated 18.12.2020]

After successfully completing this module, students will be able to independently implement algorithms using Matlab to solve mathematical problems, process experimental data and display this data graphically.

[updated 19.02.2018]

Module content:

- Programming in Matlab
- Types of Matlab programs
- Graphical output in 2D and 3D
- Diagrams of statistical data and measurement data
- Symbolic calculations

Applications:

- Numerical integration
- Regression, interpolation and approximation
- Zero and fixed-point search
- Gradient method

[updated 19.02.2018]

Teaching methods/Media:

100% of the lecture will take place in the PC lab "Angewandte Mathematik, Statistik und eLearning". All of the practical exercises for the lecture, as well as solving exercises, homework and case studies will be done with the e-learning system MathCoach and with mathematical numerical software (AMSEL lab: PC lab: "Angewandte Mathematik, Statistik und eLearning").

Suitable for exchange students (learning agreement)

Workload:

30 class hours (= 22.5 clock hours) over a 15-week period. The total student study time is 60 hours (equivalent to 2 ECTS credits). There are therefore 37.5 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules): None.

Recommended as prerequisite for:

Module coordinator: Prof. Dr. Christine Sick

Lecturer: Prof. Dr. Christine Sick

[updated 14.02.2017]

This compulsory elective course is based on the mandatory Bachelor module "Professional Presentations". The focus of this module will be the oral presentation of a project carried out at university, student conference or the workplace.

To this end, students will deepen their strategic knowledge in order to be able to give professional, subject-specific presentations, define quality criteria and further develop their language skills. They will test and hone these strategies, their knowledge and their skills in short presentations at different presentation phases and receive feedback from their fellow students. Students will learn how to combine the phases of their presentation to form a whole, how to enhance their presentations with the help of visual aids, how to prepare themselves for their presentation in a targeted manner and finally, how to give their presentation.

[updated 24.02.2018]

Module content:

- Repetition and application of the strategies taught in the _Professional Presentations_ module
- Visual aids
- Establishing contact with the audience
- Voice and body language
- Short presentations
- Peer review

In addition, we will work on: Repeating relevant linguistic resp. grammatical structures (where necessary) Intercultural competence Raising awareness for functional language use

[updated 24.02.2018]

Teaching methods/Media: Teaching and learning materials for specific target groups (print, audio, video)

[updated 24.02.2018]

Recommended or required reading:

Students will receive a list of recommended teaching and learning materials. The following materials are free of charge for students of the htw saar. We recommend their use for independent learning:

- Christine Sick, unter Mitarbeit von Miriam Lange (2011): TechnoPlus Englisch 2.0 (Multimediales Sprachlernprogramm für Technisches und Business Englisch, Niveau B1-B2+), EUROKEY.

- Christine Sick (2015): TechnoPlus Englisch VocabApp (Mobile-Learning-Angebot insbesondere zum Grundwortschatz, alle Niveaustufen), EUROKEY.

Workload:

60 class hours (= 45 clock hours) over a 15-week period. The total student study time is 150 hours (equivalent to 5 ECTS credits). There are therefore 105 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules):

None.

Recommended as prerequisite for:

Module coordinator:

Prof. Dr. Helmut Folz

Lecturer: Prof. Dr. Helmut Folz

[updated 11.11.2016]

After successfully completing this module, students will:

 $_$ be proficient in the basic language concepts (data types, expressions, control structures, functions, exception handling) of C++.

_ be proficient in the special C++ concepts of object orientation (classes, objects, inheritance,

polymorphism) and be able to implement them in programming terms.

_ be capable of using function and class templates in programs.

_ be able handle basic classes and algorithms of the C++ standard library (e. g. strings, input/output, container classes, generic algorithms) confidently.

_ be able to develop solutions to difficult problems in small teams and implement them in a well-structured manner.

[updated 24.02.2018]

Module content:

The course will introduce students to structured, object-oriented and generic programming with C/C++. C/C++ language elements will be introduced and their use practiced in exercises on the basis of the knowledge imparted in the Programming 1-3 modules. The use of the C/C++ standard library will be emphasized.

- 1. Introduction
 - History
 - Use
 - Development of C/C++ programs
 - A comparison of C++ and Java
- 2. The basics
 - 2.1 The basics and data types
 - 2.2 Arithmetic
 - 2.3 Type transformations
 - 2.4 Control structures
- 3. Functions and structures
 - 3.1 Functions and references
 - 3.2 Structures
 - 3.3 Preprocessor directives
- 4. Data types
 - 4.1 Enums and arrays
 - 4.2 C strings
 - 4.3 The string class
 - 4.4 Pointers
- 5. In/Output
 - 5.1 In/Output
 - 5.2 Input/Output formatting
 - 5.3 File handling
- 6. Classes
 - 6.1 Structure of classes
 - 6.2 Using Doxygen
 - 6.3 Copy constructor and assignment operator
 - 6.4 Class attributes and _methods
 - 6.5 Friends
- 7. Overloading operators
 - 7.1 Overloadable operators
 - 7.2 A rational number class
 - 7.3 Various applications
 - 7.4 Smart pointer
- 8. Inheritance
 - 8.1 Introduction
 - 8.2 Virtual functions
 - 8.3 Copy constructor and assignment operator
 - 8.4 Abstract classes
 - 8.5 Multi inheritance
 - 8.6 The dynamic_cast operator
- 9. Exception handling
- 10. Templates
 - 10.1 Function templates
 - 10.2 Class templates
- 11. Standard template library
 - 11.1 Introduction
 - 11.2 Sequence containers
 - 11.3 Iterators and algorithms
 - 11.4 Associative containers
- 12. Runtime Type Information (RTTI)

There are therefore 105 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules):

None.

Recommended as prerequisite for:

Module coordinator: Prof. Dr. Reinhard Brocks

Lecturer: Prof. Dr. Reinhard Brocks

After successfully completing this module, students will be able to choose the suitable tools for each phase of the implementation process. They will be able to define the toolchain for a software project, configure its development environment, and implement an automatic build process. They will be able to explain the basic functions of different programming tools and use them for a specific programming language Students will be capable of describing the structure of program libraries and frameworks and will be able to create them themselves or integrate them into their own projects. They will be able to use integrated development environments for software development.

[updated 24.02.2018]

Module content:

- Functions within source code editors
- Command line and scripts
- Software documentation tools
- Build tools
- Integrated development environments and their configuration
- Debuggers
- Version management
- Test frameworks
- Static source code analysis tools
- Profilers
- Issue tracking systems
- Cross-compiling
- Bug tracking systems
- Package managers
- Virtual machines

[updated 10.11.2016]

After completing this course, students will be able to analyze and evaluate large amounts of data and statistically evaluate it using software.

In addition, they will be able to make statements on the reliability and statistical certainty of their evaluation results.

[updated 26.02.2018]

Module content:

- 1. Risk-Based Decision Making:
 - 1.1 Bayesian networks
 - 1.2 Decision trees
 - 1.3 Boolean reliability theory
 - 1.4 Markov chains
 - 1.5 Statistical decisions: hypothesis testing and estimates
 - 1.6 Decisions in contingency tables
 - 1.7 Software: SPSS, Answertree
 - 1.8 Case studies
- 2. Statistical data analysis data mining with statistical methods
 - 2.1 Scale types of random features
 - 2.2 Statistical measures for data sets
 - 2.3 Correlations
 - 2.4 Cluster analysis technique data aggregation
 - 2.5 Probit analyses
 - 2.6 Software: SPSS, Clementine
 - 2.7 Case studies

[updated 26.02.2018]

Teaching methods/Media:

100% of the lecture will take place in the PC lab AMSEL "Angewandte Mathematik, Statistik und eLearning". Computer-supported practical case studies will be carried out here using SPSS and R.

In addition, the eLearning system MathCoach-Statistik (AMSEL PC laboratory 5306) will be used. Students must complete homework and exercises using this system.

[updated 10.11.2016]

After successfully completing this module, students will be familiar with the properties and effects of different sensors and actuators and how these can be modeled in software. Students will learn methods of navigation and mapping for mobile robots and how to use them. Students will be able to construct and program a mobile robot that fulfills a specific task.

[updated 19.02.2018]

Module content:

1. Theory

- History of robotics, overview of robotics,
- Sensors and actuators
- Evaluation of measured values and sensor fusion
- Odometry and dead reckoning
- Mapping methods

II. Practice

Creating a mobile robot Groups consisting of 2 students each receive the necessary equipment.

- . Familiarization with the hardware and software by means of simple exercises and tasks
- Group-specific project
- Building and programming the robot, realization and test
- Documentation
- Lecture with presentation

[updated 19.02.2018]

Teaching methods/Media:

Lecture with PowerPoint slides in the theoretical part, supervised practical experiments during the practical phase, work in largely independent individual groups with accompanying project discussions during the realization.

[updated 19.04.2021]

After successfully completing this module, students will understand the basic concepts of modern web development.

They will be able to apply Ruby and Ruby on Rails paradigms and can combine Ruby's ecosystem building blocks to map application events.

Students will be able to identify the layers of a web application, as well as identify and correct the origin of errors. This gives them the ability to correct and develop Ruby applications.

In addition, they will also be able to estimate the challenges a cloud environment can pose for a web application and how to solve them. This will allow them to develop scalable Ruby on Rails applications.

[updated 26.02.2018]

Module content:

Principles of the object-oriented language Ruby - Introduction to the metaprogramming in Ruby Test-driven development with Ruby and RSpec Source code versioning with Git Architecture of the Ruby on Rails framework

- The Model View Controller Paradigm on the Web
- Exception handling, introduction to the object relationship mapper Active Record
- Action controller
- Action view
- Web services with Ruby and Ruby on Rails
- REST
- OAuth2
- Cloud concepts with Ruby on Rails applications
- File storage and access in the cloud

Degree programme: Applied Informatics, Bachelor, ASPO 01.10.2017

Module code: PIB-ROBO

Hours per semester week / Teaching method: 1PA+1S (2 hours per week)

ECTS credits: 3

Semester: 4

Mandatory course: no

Language of instruction:

German

Assessment:

Participation in 5 classes, 3 workshops, the competition + a written composition

[updated 24.02.2018]

Curricular relevance:

KI628 Computer Science and Communication Systems, Bachelor, ASPO 01.10.2014, semester 6, optional course, non-technical

KIB-ROBO Computer Science and Communication Systems, Bachelor, ASPO 01.10.2017, semester 6, optional course, non-technical

MST.RNW Mechatronics and Sensor Technology, Bachelor, ASPO 01.10.2012, optional course, non-technical

MST.RNW Mechatronics and Sensor Technology, Bachelor, ASPO 01.10.2019, optional course, non-technical

MST.RNW Mechatronics and Sensor Technology, Bachelor, ASPO 01.10.2020, optional course, non-technical

PIBWN58 Applied Informatics, Bachelor, ASPO 01.10.2011, semester 6, optional course, not informatics specific

PIB-ROBO Applied Informatics, Bachelor, ASPO 01.10.2017, semester 4, optional course, not informatics specific

MST.RNW Mechatronics and Sensor Technology, Bachelor, ASPO 01.10.2011, optional course, non-technical

Suitable for exchange students (learning agreement)

Workload:

30 class hours (= 22.5 clock hours) over a 15-week period. The total student study time is 90 hours (equivalent to 3 ECTS credits). There are therefore 67.5 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules): None.

Recommended as prerequisite for:

Module coordinator: Prof. Dr. Martina Lehser

Lecturer: Prof. Dr. Martina Lehser

[updated 10.11.2016]

Learning outcomes:

After successfully completing this module, the students will be able to assess the special challenges involved in conducting technical workshops and take them into regard during the preparatory phase of the workshop. They will be able to adapt the contents of the training courses to the participants ' previous knowledge and provide appropriate support in dealing with technical questions. Students will also be able to collect and prepare the knowledge necessary for the course and impart it to the workshop participants in such a manner as to fit their age groups.

[updated 26.02.2018]

Module content:

- Create and design the tasks for workshops and the competition
- Design and implement possible solutions
- Supervise 3 workshops
- Supervise the competition
- Conduct follow-up work and document the experiences made

[updated 26.02.2018]

Teaching methods/Media:

Introductory workshop for robot programming with Mindstorm robots on computers and tablets, supervised practical course, largely independent development of the contents in groups, project discussions and workshop coaching.

[updated 26.02.2018]

Workload:

30 class hours (= 22.5 clock hours) over a 15-week period. The total student study time is 60 hours (equivalent to 2 ECTS credits). There are therefore 37.5 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules): None.

Recommended as prerequisite for:

Module coordinator: Prof. Dr. Christine Sick

Lecturer: Prof. Dr. Christine Sick

[updated 10.11.2016]

Learning outcomes:

The course _Russian for Beginners 1_ is aimed at learners who have no previous knowledge of the language. The modules _Russian for Beginners 1_ and _Russian for Beginners 2_ are based on one another. In the course of the two modules, participants will first reach proficiency level A1 and then advance to level A2 of the European Framework of Reference for Languages.

The goal of the course is to provide students with basic knowledge of the Russian language, which will enable them to communicate in general and professional situations, both orally and in writing. To do so, all four skills (speaking, listening comprehension, reading and writing) will be trained equally. We will focus on oral communication in order to develop communicative competence in work-related situations, especially through role playing and the use of dialogues. Important grammatical structures will be taught in order to support and supplement the content of the course.

During the course, intercultural aspects will also be addressed so that students develop an awareness of cultural specificities and are able to act and communicate appropriately and competently in the respective situations.

[updated 19.02.2018]

Module content:

In the course _Russian for Beginners 1_ lessons 1 to 7 from the textbook _Otlitschno

- $1_$ will be worked on.
- Establishing contact:
- _ Greetings and saying farewell
- _ Introducing yourself and others
- _ Giving information about yourself requesting information about others
- _ Asking how someone is feeling
- _ Getting to know business partners
- The professional world
- _ Describing jobs and activities
- _ Arranging appointments
- _ Planning activities
- Oral and written communication
- _ Requesting general information (name, nationality, telephone number, e-mail address)
- _ Appointments with colleagues and business partners
- _ Time, daily schedule, scheduling
- _ Making telephone calls

Intercultural competence

Basic knowledge about Russian culture, history and society

In addition, both the Cyrillic alphabet and basic grammatical structures will be taught

(e. g. declination of nouns, noun case usage, adjectives, personal pronouns and prepositions, verb conjugation, syntax)

Students are expected to work on and expand their basic vocabulary independently.

[updated 26.02.2018]

Teaching methods/Media:

Teaching and learning materials (print media, slides, audio-visual teaching materials) and recommended podcasts compiled specifically for the learning group.

Workload:

60 class hours (= 45 clock hours) over a 15-week period. The total student study time is 150 hours (equivalent to 5 ECTS credits). There are therefore 105 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules): None.

Recommended as prerequisite for:

Module coordinator: Prof. Dr. Albrecht Kunz

Lecturer: Prof. Dr. Albrecht Kunz

[updated 10.11.2016]

After successfully completing this module, students will have comprehensive knowledge about current microelectronic production methods. This knowledge will enable them to classify and assess the limits and possibilities of integrated semiconductor devices and their circuit families.

Students will have detailed knowledge about common circuit families. They will understand the differences between the different circuit families and be able to analyze and evaluate them by using numerically generated simulation results with regard to possible applications.

[updated 26.02.2018]

Module content:

1.Technological processes:

- 1.1.Trends in microelectronics,
- 1.2.Materials,

1.3.Wafer fabrication,

- 1.4.Oxidation, lithography, etching and doping techniques,
- 1.5.Deposition methods,
- 1.6.MOS and bipolar technologies for circuit integration,
- 1.7.Integration examples

2.Semiconductor circuit families:

2.1.Diode transistor logic,

2.2.Transistor-transistor logic,

- 2.3.Emitter-coupled logic,
- 2.4.Integrated injection logic,
- 2.5.NMOS circuits

[updated 10.11.2016]

After successfully completing this module, students will be able to develop a communicative system with sensors and microcontrollers in an international and globally distributed project team. They will learn to assume professional and organizational responsibility und understand and experience the importance of intercultural competence with a focus on China.

In addition, through their work in a project team with different linguistic, social and geographical environments, students will:

- understand the importance of communication in and with the other language environment
- work with team members from different learning backgrounds and nations
- recognize and use different competences
- establish contacts with foreign partners promoting internationalization
- learn to accept and adapt to other work methods

[updated 19.02.2018]

Module content:

Students from various fields and levels of study and with different degrees from the htw saar and CDHAW (Tongji Univ., Shanghai) will form a globally distributed team. The team will consist of 5 to 15 students. Over the period of a full semester, the team will work on a specific task within the project. At the team 's locations, different aspects will be dealt with. At the htw saar the topics will be mechatronics and software and at the CDHAW the topics will be hardware and production.

The project results will be presented to the lecturers in the form of a presentation and a final report.

Project management:

- Specifications
- Project planning
- Version management
- Software development:
- Embedded devices
- TCP/IP communication
- Data logging

Electrical Engineering/Mechatronics:

- Electronic circuits
- Test design environment
- CAD design casing parts
- Intercultural competence:
- Focus: China
- Patterns of communication
- Work methods
- The concept of time

[updated 29.06.2018]

After successfully completing this course, students will be able to use their programming skills to make system-specific scripting languages usable. Based on the example of the collaborative and non-collaborative industrial robots used, students will learn how to factor the physical hardware limitations into the implementation. In addition, they will be aware of the need to comply with safety-relevant legal requirements when using industrial robots.

Students will be able to independently develop solutions for common robot applications in industrial manufacturing.

In addition to the professional qualifications in the (interdisciplinary) project team, they will also gather experience in assuming professional and organizational responsibility.

[updated 06.11.2020]

Module content:

During this course, students will cover how to program six-axis collaborative industrial robots. The goal is the development of plugins using a system-dependent script language.

First Part (lectures, practical exercises):

- Safety aspects when using industrial robots
- Dealing with robot hardware
- System dependent script language (with UR as an example)
- Development of system-specific plug-ins UR CAPS (using UR as an example)

Second Part (project):

Development of plug-ins for integration into the control software of the robots to solve common industrial problems (e.g. assembly processes, Pick&Place)

Recommended as prerequisite for:

Module coordinator: Prof. Dr. Christine Sick

Lecturer:

Dr. Victoriana Herrador Morillo

[updated 16.10.2017]

Learning outcomes:

The course "Spanish for Beginners I" is aimed towards learners with little or no previous knowledge of the Spanish language. The courses "Spanish for Beginners I and II" are based on each other. In the course of the two modules, students will first reach proficiency level A1 and then advance to level A2 of the European Framework of Reference for Languages.

The goal of the course is to provide students with basic knowledge of the Spanish language, which will enable them to communicate in general and professional situations as quickly as possible, both orally and in writing. To do so, all four skills (speaking, listening comprehension, reading and writing) will be trained equally. Content development will be supported by the repetition of the relevant grammatical structures.

The course takes a communicative and pragmatic approach that particularly promotes communicative competence in job-relevant situations through the use of role playing and situational dialogues. This also includes intercultural aspects that raise the students' awareness of cultural differences and enable them to assert themselves in specific situations.

[updated 24.02.2018]

Module content:

Content:

In the course _Spanish for Beginners I_ students will learn the lessons 1 to 5 from _Meta Profesional A1-A2_ (Spanisch für den Beruf. Klett Verlag).

Establishing contact

- Formal greetings
- Introductions
- Asking how someone is feeling
- Giving information about yourself and requesting information about others
- Saying thank you, apologizing and saying goodbye
- Describing a person
- Giving directions
- Getting to know business partners
- Job profiles and the workplace
- Describing jobs and activities
- Types of companies
- Showing and describing products
- Describing departments and responsibilities
- Planning activities
- Interaction with colleagues
- Participating in international trade fairs

Oral and written communication

- Common verbal expressions (asking for names, telephone numbers and e-mail addresses)
- Business lunches
- Making appointments with colleagues
- Requesting and giving information
- Writing e-mails
- Time
- Daily schedule, making appointments

In addition, basic grammar structures will be learned (e. g. indicative presence of regular and irregular verbs, form of progression, prepositions, personal and possessive pronouns, asking questions, syntax).

Students should work on and expand their basic vocabulary independently.

[updated 19.02.2018]

Teaching methods/Media:

Teaching and learning materials (print media, slides, audio-visual teaching materials), multimedia learning software compiled specifically for the learning group.

[updated 19.02.2018]

Recommended or required reading:

The course is based on the following textbook and will be supplemented by additional learning material: Meta Profesional _ Spanisch für den Beruf, Lehrbuch ISBN: 978-3-12-515460-5

We also recommend these books for grammar: Uso de la Gramática Española. Nivel Elemental. ISBN 3-12-5358116-6 Spanische Grammatik für Selbstlerner 01 Bd.1 ISBN-10: 3896577093 Tiempo para conjugar. Buch mit CD-Rom, PC, Mac. ISBN 3-12-535809-4

Students will receive a list of recommended teaching and learning materials.

PIB-SFA2 Applied Informatics, Bachelor, ASPO 01.10.2017, semester 6, optional course, not informatics specific

MST.SA2 Mechatronics and Sensor Technology, Bachelor, ASPO 01.10.2011, semester 6, optional course, non-technical

Workload:

30 class hours (= 22.5 clock hours) over a 15-week period. The total student study time is 60 hours (equivalent to 2 ECTS credits). There are therefore 37.5 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules): None.

Recommended as prerequisite for:

Module coordinator: Prof. Dr. Christine Sick

Lecturer:

Dr. Victoriana Herrador Morillo

[updated 16.10.2017]

Learning outcomes:

The courses "Spanish for Beginners I and II" are based on each other. In the course of the two modules, students will first reach proficiency level A1 and then advance to level A2 of the European Framework of Reference for Languages.

The course Spanish for Beginners II_ is aimed at learners with basic knowledge of the Spanish language at level A1 of the European Reference Framework or the module _Spanish for Beginners I_.

The goal of the course is to provide students with basic knowledge of the Spanish language, which will enable them to communicate in general and professional situations as quickly as possible, both orally and in writing. To do so, all four skills (speaking, listening comprehension, reading and writing) will be trained equally. Content development will be supported by the repetition of the relevant grammatical structures.

The course takes a communicative and pragmatic approach that particularly promotes communicative competence in job-relevant situations through the use of role playing and situational dialogues. This also includes intercultural aspects that raise the students' awareness of cultural differences and enable them to assert themselves in specific situations.

[updated 24.02.2018]

Module content:

Content:

In the course _Spanish for Beginners II_ students will learn the lessons 6 to 10 from _Meta Profesional A1-A2_ (Spanisch für den Beruf, Klett Verlag).

Work

- Describing your private and professional daily routine
- A day at work: habits and time
- Talking about preferences
- Agreeing and objecting to things
- Talking about experiences
- Opening hours
- Organizing a weekly schedule
- Talking about plans

Talking on the telephone

- Making business calls

Business appointments

- Making, accepting and rejecting invitations and suggestions
- Arranging appointments
- Talking about the weather
- Making a hotel reservation
- Planning business meals
- Deciding what is most important at the first meeting with a customer

Products and projects

- Describing buildings and offices
- Assessing and describing products and prices
- Talking about quantities
- Preparing a company presentation

Professional training and experience

- Reading job advertisements
- Composing an application cover letter
- Skills, strengths and weaknesses
- Creating a resume
- Participating in a job interview

In addition, we will concentrate on basic grammatical structures (such as for example, the imperative, future and past of regular and irregular verbs). Students should work on and expand their basic vocabulary independently.

[updated 19.02.2018]

Teaching methods/Media:

Teaching and learning materials (print media, slides, audio-visual teaching materials), multimedia learning software compiled specifically for the learning group.

[updated 19.02.2018]

Recommended or required reading:

The course is based on the following textbook and will be supplemented by additional learning material: Meta profesional A1-A2 Spanisch für den Beruf. Klett Verlag; ISBN: 978-3-12-515460-5

We also recommend these books for grammar:

Uso de la Gramática Española. Nivel Elemental. ISBN 3-12-5358116-6 Spanische Grammatik für Selbstlerner 01 Bd.1 ISBN-10: 3896577093 Tiempo para conjugar. Buch mit CD-Rom, PC, Mac. ISBN 3-12-535809-4

Students will receive a list of recommended teaching and learning materials.

Workload:

60 class hours (= 45 clock hours) over a 15-week period. The total student study time is 150 hours (equivalent to 5 ECTS credits). There are therefore 105 hours available for class preparation and follow-up work and exam preparation.

Recommended prerequisites (modules): None.

Recommended as prerequisite for:

Module coordinator:

Prof. Dr. Martin Buchholz

Lecturer: Prof. Dr. Martin Buchholz Johannes Krautkremer,

[updated 19.04.2021]

After successfully completing this module, students will be able to transfer an interdisciplinary problem within a complex system and derive a solution using a specific methodology.

[updated 19.02.2018]

Module content:

Project worked based on a specific, complex task definition using the methodology learned:

- Requirements analysis and definition
- System design (calculation, simulation, evaluation)
- System integration
- System verification and validation
- Project and risk management
- Sustainable development and optimization

[updated 19.02.2018]

Teaching methods/Media:

Coaching during the project

[updated 14.07.2016]

Recommended or required reading:

Recommended reading according to project. Trade journals and data sheets

[updated 10.11.2016]

Learning outcomes:

After successfully completing this module, students will be capable of examining and checking technical texts. They will be able to analyze different kinds of texts based on their target group intentions. The influences of text design will be illustrated and structures for easier text creation will be learned. The documentation of research and work findings, including how to handle quotations and Internet sources, their identification in texts and the creation of a bibliography will enable students to create technical/scientific texts more efficiently.

[updated 26.02.2018]

Module content:

- 1 Text design in standards, guidelines and laws
- 2 Rules for technical texts
- 3 Operating instructions
- 4 Abstracts/text summaries
- 5 Comprehensibility of texts
- 6 Business correspondence
- 7 Notes, transcripts, minutes, reports
- 8 Structure and numbering of texts
- 9 Citation rules
- 10 Bibliography
- 11 Time management for the creation of longer texts
